

MTConnect[®] Standard
Part 1.0 – Overview and Fundamentals
Version 1.6.0

Prepared for: MTConnect Institute
Prepared on: July 15, 2020

MTConnect[®] is a registered trademark of AMT - The Association for Manufacturing Technology. Use of *MTConnect* is limited to use as specified on <http://www.mtconnect.org/>.

MTConnect Specification and Materials

The Association For Manufacturing Technology (AMT) owns the copyright in this MTConnect Specification or Material. AMT grants to you a non-exclusive, non-transferable, revocable, non-sublicensable, fully-paid-up copyright license to reproduce, copy and redistribute this MTConnect Specification or Material, provided that you may only copy or redistribute the MTConnect Specification or Material in the form in which you received it, without modifications, and with all copyright notices and other notices and disclaimers contained in the MTConnect Specification or Material.

If you intend to adopt or implement an MTConnect Specification or Material in a product, whether hardware, software or firmware, which complies with an MTConnect Specification, you shall agree to the MTConnect Specification Implementer License Agreement (“Implementer License”) or to the MTConnect Intellectual Property Policy and Agreement (“IP Policy”). The Implementer License and IP Policy each sets forth the license terms and other terms of use for MTConnect Implementers to adopt or implement the MTConnect Specifications, including certain license rights covering necessary patent claims for that purpose. These materials can be found at www.MTConnect.org, or by contacting <mailto:info@MTConnect.org>.

MTConnect Institute and AMT have no responsibility to identify patents, patent claims or patent applications which may relate to or be required to implement a Specification, or to determine the legal validity or scope of any such patent claims brought to their attention. Each MTConnect Implementer is responsible for securing its own licenses or rights to any patent or other intellectual property rights that may be necessary for such use, and neither AMT nor MTConnect Institute have any obligation to secure any such rights.

This Material and all MTConnect Specifications and Materials are provided “as is” and MTConnect Institute and AMT, and each of their respective members, officers, affiliates, sponsors and agents, make no representation or warranty of any kind relating to these materials or to any implementation of the MTConnect Specifications or Materials in any product, including, without limitation, any expressed or implied warranty of noninfringement, merchantability, or fitness for particular purpose, or of the accuracy, reliability, or completeness of information contained herein. In no event shall MTConnect Institute or AMT be liable to any user or implementer of MTConnect Specifications or Materials for the cost of procuring substitute goods or services, lost profits, loss of use, loss of data or any incidental, consequential, indirect, special or punitive damages or other direct damages, whether under contract, tort, warranty or otherwise, arising in any way out of access, use or inability to use the MTConnect Specification or other MTConnect Materials, whether or not they had advance notice of the possibility of such damage.

1 1 Overview of MTConnect

2 MTConnect is a data and information exchange standard that is based on a *data dictionary*
3 of terms describing information associated with manufacturing operations. The standard
4 also defines a series of *semantic data models* that provide a clear and unambiguous repre-
5 sentation of how that information relates to a manufacturing operation. The MTConnect
6 Standard has been designed to enhance the data acquisition capabilities from equipment in
7 manufacturing facilities, to expand the use of data driven decision making in manufactur-
8 ing operations, and to enable software applications and manufacturing equipment to move
9 toward a plug-and-play environment to reduce the cost of integration of manufacturing
10 software systems.

11 The MTConnect standard supports two primary communications methods – *Request/Re-*
12 *sponse* and *Publish/Subscribe* type of communications. The *Request/Response* communi-
13 cations structure is used throughout this document to describe the functionality provided
14 by MTConnect. See *Section 8.3.6 - Streaming Data* for details describing the functionality
15 of the *Publish/Subscribe* communications structure available from an *Agent*.

16 Although the MTConnect Standard has been defined to specifically meet the requirements
17 of the manufacturing industry, it can also be readily applied to other application areas as
18 well.

19 The MTConnect Standard is an open, royalty free standard – meaning that it is available
20 for anyone to download, implement, and utilize in software systems at no cost to the
21 implementer.

22 The *semantic data models* defined in the MTConnect Standard provide the information re-
23 quired to fully characterize data with both a clear and unambiguous meaning and a mech-
24 anism to directly relate that data to the manufacturing operation where the data originated.
25 Without a *semantic data model*, client software applications must apply an additional layer
26 of logic to raw data to convey this same level of meaning and relationship to manufacturing
27 operations. The approach provided in the MTConnect Standard for modeling and organiz-
28 ing data allows software applications to easily interpret data from a wide variety of data
29 sources which reduces the complexity and effort to develop applications.

30 The data and information from a broad range of manufacturing equipment and systems
31 are addressed by the MTConnect Standard. Where the *data dictionary* and *semantic data*
32 *models* are insufficient to define some information within an implementation, an imple-
33 menter may extend the *data dictionary* and *semantic data models* to address their specific
34 requirements. See *Section 6.7 - Extensibility* for guidelines related to extensibility of the
35 MTConnect Standard.

36 To assist in implementation, the MTConnect Standard is built upon the most prevalent
37 standards in the manufacturing and software industries. This maximizes the number of
38 software tools available for implementation and provides the highest level of interoper-
39 ability with other standards, software applications, and equipment used throughout manu-
40 facturing operations.

41 Current MTConnect implementations are based on HTTP as a transport protocol and XML
42 as a language for encoding each of the *semantic data models* into electronic documents.
43 All software examples provided in the various MTConnect Standard documents are based
44 on these two core technologies.

45 The base functionality defined in the MTConnect Standard is the *data dictionary* describ-
46 ing manufacturing information and the *semantic data models*. The transport protocol and
47 the programming language used to represent or transfer the information provided by the
48 *semantic data models* are not restricted in the standard to HTTP and XML. Therefore,
49 other protocols and programming languages may be used to represent the semantic models
50 and/or transport the information provided by these data models between an *Agent* (server)
51 and a client software application as may be required by a specific implementation.

52 Note: The term "document" is used with different meanings in the MTConnect Stan-
53 dard:

54 • Meaning 1: The MTConnect Standard itself is comprised of multiple documents
55 each addressing different aspects of the Standard. Each document is referred to as a
56 *Part* of the Standard.

57 • Meaning 2: In an MTConnect implementation, the electronic documents that are
58 published from a data source and stored by an *Agent*.

59 • Meaning 3: In an MTConnect implementation, the electronic documents generated
60 by an *Agent* for transmission to a client software application.

61 The following will be used throughout the MTConnect Standard to distinguish be-
62 tween these different meanings for the term "document":

63 • MTConnect Document(s) or Document(s) shall be used to refer to printed or elec-
64 tronic document(s) that represent a *Part(s)* of the MTConnect Standard.

65 • All reference to electronic documents that are received from a data source and stored
66 in an *Agent* shall be referred to as "*Document(s)*" and are typically provided with a
67 prefix identifier; e.g. *Asset Document*.

- 68 • All references to electronic documents generated by an *Agent* and sent to a client
69 software application shall be referred to as a "*Response Document*".

70 When used with no additional descriptor, the form "document" shall be used to refer to
71 any printed or electronic document.

72 Manufacturing software systems implemented utilizing MTConnect can be represented by
73 a very simple structure as shown in *Figure 1*.

Figure 1: Basic MTConnect Implementation Structure

74 The three basic modules that comprise a software system implemented using MTConnect
75 are:

76 Equipment: Any data source. In the MTConnect Standard, equipment is defined as any
77 tangible property that is used to equip the operations of a manufacturing facility. Examples
78 of equipment are machine tools, ovens, sensor units, workstations, software applications,
79 and bar feeders.

80 Agent: Software that collects data published from one or more piece(s) of equipment,
81 organizes that data in a structured manner, and responds to requests for data from client
82 software systems by providing a structured response in the form of a *Response Document*
83 that is constructed using the *semantic data models* defined in the Standard.

84 Note: The *Agent* may be fully integrated into the piece of equipment or the *Agent* may be
85 independent of the piece of equipment. Implementation of an *Agent* is the responsibility
86 of the supplier of the piece of equipment and/or the implementer of the *Agent*.

87 Client Software Application: Software that requests data from *Agents* and processes
88 that data in support of manufacturing operations.

89 Based on *Figure 1* , it is important to understand that the MTConnect Standard only ad-
90 dresses the following functionality and behavior of an *Agent*:

- 91 ● the method used by a client software application to request information from an
92 *Agent*.
- 93 ● the response that an *Agent* provides to a client software application.
- 94 ● a *data dictionary* used to provide consistency in understanding the meaning of data
95 reported by a data source.
- 96 ● the description of the *semantic data models* used to structure *Response Documents*
97 provided by an *Agent* to a client software application.

98 These functions are the primary building blocks that define the *Base Functional Structure*
99 of the MTConnect Standard.

100 There are a wide variety of data sources (equipment) and data consumption systems (client
101 software systems) used in manufacturing operations. There are also many different uses
102 for the data associated with a manufacturing operation. No single approach to implement-
103 ing a data communication system can address all data exchange and data management
104 functions typically required in the data driven manufacturing environment. MTConnect
105 has been uniquely designed to address this diversity of data types and data usages by pro-
106 viding different *semantic data models* for different data application requirements:

107 Data Collection: The most common use of data in manufacturing is the collection of
108 data associated with the production of products and the operation of equipment that pro-
109 duces those products. The MTConnect Standard provides comprehensive *semantic data*
110 *models* that represent data collected from manufacturing operations. These *semantic data*
111 *models* are detailed in *MTConnect Standard: Part 2.0 - Devices Information Model* and
112 *MTConnect Standard: Part 3.0 - Streams Information Model* of the MTConnect Standard.

113 Inter-operations Between Pieces of Equipment: The MTConnect Standard provides
114 an *Interaction Model* that structures the information required to allow multiple pieces of
115 equipment to coordinate actions required to implement manufacturing activities. This
116 *Interaction Model* is an implementation of a *Request/Response* messaging structure. This
117 *Interaction Model* is called `Interfaces` which is detailed in *MTConnect Standard: Part*
118 *5.0 - Interfaces* of the MTConnect Standard.

119 Shared Data: Certain information used in a manufacturing operation is commonly
120 shared amongst multiple pieces of equipment and/or software applications. This infor-
121 mation is not typically "owned" by any one manufacturing resource. The MTConnect

122 Standard represents this information through a series of *semantic data models* – each de-
123 scribing different types of information used in the manufacturing environment. Each type
124 of information is called an *MTCConnect Asset*. *MTCConnect Assets* are detailed in *MTCCon-*
125 *nect Standard: Part 4.0 - Assets Information Model*, and its sub-*Parts*, of the MTCConnect
126 Standard.

127 **2 Purpose of This Document**

128 This document, *MTCConnect Standard Part 1.0 - Overview and Fundamentals* of the *MT-*
129 *Connect* Standard, addresses two major topics relating to the MTCConnect Standard. The
130 first sections of the document define the organization of the documents used to describe the
131 MTCConnect Standard; including the terms and terminology used throughout the Standard.
132 The balance of the document defines the following:

- 133 • Operational concepts describing how an *Agent* should organize and structure data
134 that has been collected from a data source.
- 135 • Definition and structure of the *Response Documents* supplied by an *Agent*.
- 136 • The protocol used by a client software application to communicate with an *Agent*.

137 3 Terminology and Conventions

138 3.1 Glossary

139 CDATA

140 General meaning:

141 An abbreviation for Character Data.

142 CDATA is used to describe a value (text or data) published as part of an XML ele-
143 ment.

144 For example, "This is some text" is the CDATA in the XML element:

145 `<Message ...>This is some text</Message>`

146 Appears in the documents in the following form: CDATA

147 HTTP

148 Hyper-Text Transport Protocol. The protocol used by all web browsers and web
149 applications.

150 Note: HTTP is an IETF standard and is defined in RFC 7230.

151 See <https://tools.ietf.org/html/rfc7230> for more information.

152 NMTOKEN

153 The data type for XML identifiers.

154 Note: The identifier must start with a letter, an underscore "_" or a colon. The next
155 character must be a letter, a number, or one of the following ".", "-", "_", ":". The
156 identifier must not have any spaces or special characters.

157 Appears in the documents in the following form: NMTOKEN.

158 REST

159 Stands for REpresentational State Transfer: A software architecture where a client
160 software application and server move through a series of state transitions based
161 solely on the request from the client and the response from the server.

162 Appears in the documents in the following form: REST.

163 URI

164 Stands for Universal Resource Identifier.

165 See <http://www.w3.org/TR/uri-clarification/#RFC3986>

166 URL

167 Stands for Uniform Resource Locator.

168 See <http://www.w3.org/TR/uri-clarification/#RFC3986>

169 URN

170 Stands for Uniform Resource Name.

171 See <http://www.w3.org/TR/uri-clarification/#RFC3986>

172 UTC/GMT

173 Stands for Coordinated Universal Time/Greenwich Mean Time.

174 UTC/GMT is the primary time standard by which the world regulates clocks and
175 time.

176 The time stamp for all information reported in an *MTConnect Response Document*
177 is provided in UTC/GMT format.

178 UUID

179 General meaning:

180 Stands for Universally Unique Identifier. (Can also be referred to as a GUID in some
181 literature Globally Unique Identifier).

182 Note: Defined in RFC 4122 of the IETF. See <https://www.ietf.org/rfc/rfc4122.txt>
183 for more information.

184 Appears in the documents in the following form: UUID.

185 Used as an attribute for an XML element:

186 Used as an attribute that provides a unique identity for a piece of information re-
187 ported by an *Agent*.

188 Appears in the documents in the following form: `uuid`.

189 W3C

190 Stands for World Wide Web Consortium.

191 W3C is an international community of organizations and the public work together
192 to develop internet standards.

193 W3C Standards are used as a guide within the MTConnect Standard.

194 XML

195 Stands for eXtensible Markup Language.

196 XML defines a set of rules for encoding documents that both a human-readable and
197 machine-readable.

198 XML is the language used for all code examples in the MTConnect Standard.

199 Refer to <http://www.w3.org/XML> for more information about XML.

200 XPath

201 General meaning:

202 XPath is a command structure that describes a way for a software system to locate
203 information in an XML document.

204 XPath uses an addressing syntax based on a path through the document's logical
205 structure.

206 See <http://www.w3.org/TR/xpath> for more information on XPath.

207 Appears in the documents in the following form: XPath.

208 *Abstract Element*

209 An element that defines a set of common characteristics that are shared by a group
210 of elements.

211 An abstract element cannot appear in a document. In a specific implementation of
212 a schema, an abstract element is replaced by a derived element that is itself not an
213 abstract element. The characteristics for the derived element are inherited from the
214 abstract element.

215 Appears in the documents in the following form: abstract.

216 *Adapter*

217 An optional piece of hardware or software that transforms information provided by
218 a piece of equipment into a form that can be received by an *Agent*.

219 Appears in the documents in the following form: adapter.

220 *Agent*

221 Refers to an MTConnect Agent.

222 Software that collects data published from one or more piece(s) of equipment, orga-
223 nizes that data in a structured manner, and responds to requests for data from client
224 software systems by providing a structured response in the form of a *Response Doc-*
225 *ument* that is constructed using the *semantic data models* defined in the Standard.

226 Appears in the documents in the following form: *Agent*.

227 *Application Programming Interface*

228 A set of methods to provide communications between software applications.

229 The API defined in the MTConnect Standard describes the methods for providing
230 the *Request/Response* Information Exchange between an *Agent* and client software
231 applications.

232 Appears in the documents in the following forms: Application Programming Inter-
233 face or API.

234 **Archetype**

235 General Description of an *MTCConnect Asset*:

236 Archetype is a class of *MTCConnect Assets* that provides the requirements, con-
237 straints, and common properties for a type of *MTCConnect Asset*.

238 Appears in the documents in the following form: Archetype.

239 Used as an XML term describing an *MTCConnect Asset*:

240 In an XML representation of the *Asset Information Models*, Archetype is an ab-
241 stract element that is replaced by a specific type of *Asset Archetype*.

242 Appears in the documents in the following form: Archetype

243 **Asset**

244 General meaning:

245 Typically referred to as an *MTCConnect Asset*.

246 An *MTCConnect Asset* is something that is used in the manufacturing process, but is
247 not permanently associated with a single piece of equipment, can be removed from
248 the piece of equipment without compromising its function, and can be associated
249 with other pieces of equipment during its lifecycle.

250 Used to identify a storage area in an *Agent*:

251 See description of *buffer*.

252 Used as an *Information Model*:

253 Used to describe an *Information Model* that contains the rules and terminology that
254 describe information that may be included in electronic documents representing *MT-*
255 *Connect Assets*.

256 The *Asset Information Models* defines the structure for the *Assets Response Docu-*
257 *ment*.

258 Individual *Information Models* describe the structure of the *Asset Documents* rep-
259 resent each type of *MTCConnect Asset*. Appears in the documents in the following
260 form: *Asset Information Models* or (asset type) *Information Model*.

261 Used when referring to an *MTCConnect Asset*:

262 Refers to the information related to an *MTCConnect Asset* or a group of *MTCConnect*
263 *Assets*.

264 Appears in the documents in the following form: *Asset* or *Assets*.

265 Used as an XML container or element:

- 266 • When used as an XML container that consists of one or more types of `Asset`
267 XML elements.
- 268 Appears in the documents in the following form: `Assets`.
- 269 • When used as an abstract XML element. It is replaced in the XML document
270 by types of `Asset` elements representing individual *Asset* entities.
- 271 Appears in the documents in the following form: `Asset`.

272 Used to describe information stored in an *Agent*:

273 Identifies an electronic document published by a data source and stored in the *assets*
274 *buffer* of an *Agent*.

275 Appears in the documents in the following form: *Asset Document*.

276 Used as an XML representation of an *MTConnect Response Document*:

277 Identifies an electronic document encoded in XML and published by an *Agent* in
278 response to a *Request* for information from a client software application relating to
279 *MTConnect Assets*.

280 Appears in the documents in the following form: `MTConnectAssets`.

281 Used as an *MTConnect Request*:

282 Represents a specific type of communications request between a client software ap-
283 plication and an *Agent* regarding *MTConnect Assets*.

284 Appears in the documents in the following form: *Asset Request*.

285 Used as part of an *HTTP Request*:

286 Used in the path portion of an *HTTP Request Line*, by a client software applica-
287 tion, to initiate an *Asset Request* to an *Agent* to publish an `MTConnectAssets`
288 document.

289 Appears in the documents in the following form: `asset`.

290 ***Asset Document***

291 An electronic document published by an *Agent* in response to a *Request* for infor-
292 mation from a client software application relating to *Assets*.

293 ***Attribute***

294 A term that is used to provide additional information or properties for an element.

295 Appears in the documents in the following form: `attribute`.

296 ***Base Functional Structure***

297 A consistent set of functionalities defined by the *MTConnect Standard*. This func-
298 tionality includes the protocol(s) used to communicate data to a client software ap-
299 plication, the *semantic data models* defining how that data is organized into *Re-*
300 *sponse Documents*, and the encoding of those *Response Documents*.

301 Appears in the documents in the following form: *Base Functional Structure*.

302 ***buffer***

303 General meaning:

304 A section of an *Agent* that provides storage for information published from pieces
305 of equipment.

306 Used relative to *Streaming Data*:

307 A section of an *Agent* that provides storage for information relating to individual
308 pieces of *Streaming Data*.

309 Appears in the documents in the following form: *buffer*.

310 Used relative to *MTConnect Assets*:

311 A section of an *Agent* that provides storage for *Asset Documents*.

312 Appears in the documents in the following form: *assets buffer*.

313 ***Child Element***

314 A portion of a data modeling structure that illustrates the relationship between an
315 element and the higher-level *Parent Element* within which it is contained.

316 Appears in the documents in the following form: *Child Element*.

317 ***Client***

318 A process or set of processes that send *Requests* for information to an *Agent*; e.g.
319 software applications or a function that implements the *Request* portion of an *Inter-*
320 *face Interaction Model*.

321 Appears in the documents in the following form: *client*.

322 ***Component***

323 General meaning:

324 A *Structural Element* that represents a physical or logical part or subpart of a piece
325 of equipment.

326 Appears in the documents in the following form: *Component*.

327 Used in *Information Models*:

328 A data modeling element used to organize the data being retrieved from a piece of
329 equipment.

- 330
 - When used as an XML container to organize *Lower Level Component* ele-
331 ments.

332 Appears in the documents in the following form: *Component s*.

- 333 • When used as an abstract XML element. `Component` is replaced in a data
334 model by a type of *Component* element. `Component` is also an XML con-
335 tainer used to organize *Lower Level* `Component` elements, *Data Entities*, or
336 both.

337 Appears in the documents in the following form: `Component`.

338 ***Composition***

339 General meaning:

340 Data modeling elements that describe the lowest level basic structural or functional
341 building blocks contained within a `Component` element.

342 Appears in the documents in the following form: *Composition*

343 Used in *Information Models*:

344 A data modeling element used to organize the data being retrieved from a piece of
345 equipment.

- 346 • When used as an XML container to organize `Composition` elements.

347 Appears in the documents in the following form: `Compositions`

- 348 • When used as an abstract XML element. `Composition` is replaced in a data
349 model by a type of *Composition* element.

350 Appears in the documents in the following form: `Composition`.

351 ***Condition***

352 General meaning:

353 An indicator of the health of a piece of equipment or a *Component* and its ability to
354 function.

355 Used as a modeling element:

356 A data modeling element used to organize and communicate information relative to
357 the health of a piece of equipment or *Component*.

358 Appears in the documents in the following form: *Condition*.

359 Used in *Information Models*:

360 An XML element used to represent *Condition* elements.

- 361 • When used as an XML container to organize *Lower Level* `Condition` ele-
362 ments.

363 Appears in the documents in the following form: `Condition`.

- 364 • When used as a *Lower Level* element, the form `Condition` is an abstract
365 type XML element. This *Lower Level* element is a *Data Entity*. `Condition`
366 is replaced in a data model by type of *Condition* element.
367 Appears in the documents in the following form: `Condition`.

368 Note: The form `Condition` is used to represent both above uses.

369 ***Controlled Vocabulary***

370 A restricted set of values that may be published as the *Valid Data Value* for a *Data*
371 *Entity*.

372 Appears in the documents in the following form: *Controlled Vocabulary*.

373 ***Current***

374 General meaning:

375 Meaning 1: A term describing the most recent occurrence of something.

376 Meaning 2: A term used to describe movement; e.g. electric current or air current.

377 Appears in the documents in the following form: `current`

378 Used in reference to an *Agent*:

379 A reference to the most recent information available to an *Agent*.

380 Appears in the documents in the following form: `current`.

381 Used as an *MTConnect Request*:

382 A specific type of communications request between a client software application and
383 an *Agent* regarding *Streaming Data*.

384 Appears in the documents in the following form: *Current Request*.

385 Used as part of an *HTTP Request*:

386 Used in the path portion of an *HTTP Request Line*, by a client software applica-
387 tion, to initiate a *Current Request* to an *Agent* to publish an `MTConnectStreams`
388 document.

389 Appears in the documents in the following form: `current`.

390 ***Current Request***

391 An HTTP request to the *Agent* for returning latest known values for the `DataItem`
392 as an `MTConnectStreams` XML document

393 ***data dictionary***

394 Listing of standardized terms and definitions used in *MTConnect Information Mod-*
395 *els*.

396 Appears in the documents in the following form: *data dictionary*.

397 ***Data Entity***

398 A primary data modeling element that represents all elements that either describe
399 data items that may be reported by an *Agent* or the data items that contain the actual
400 data published by an *Agent*.

401 Appears in the documents in the following form: *Data Entity*.

402 ***Data Item***

403 General meaning:

404 Descriptive information or properties and characteristics associated with a *Data En-*
405 *tity*.

406 Appears in the documents in the following form: data item.

407 Used in an XML representation of a *Data Entity*:

- 408 ● When used as an XML container to organize `DataItem` elements.
409 Appears in the documents in the following form: `DataItems`.
- 410 ● When used to represent a specific *Data Entity*, the form `DataItem` is an XML
411 element.
412 Appears in the documents in the following form: `DataItem`.

413 ***Data Set***

414 A set of *key-value pairs* where each entry is uniquely identified by the *key*.

415 ***Data Source***

416 Any piece of equipment that can produce data that is published to an *Agent*.

417 Appears in the documents in the following form: data source.

418 ***Data Streaming***

419 A method for an *Agent* to provide a continuous stream of information in response to
420 a single *Request* from a client software application.

421 Appears in the documents in the following form: *Data Streaming*.

422 ***Deprecated***

423 An indication that specific content in an *MTCConnect Document* is currently usable
424 but is regarded as being obsolete or superseded. It is recommended that deprecated
425 content should be avoided.

426 Appears in the documents in the following form: **DEPRECATED** .

427 ***Deprecation Warning***

428 An indicator that specific content in an *MTCConnect Document* may be changed to
429 **DEPRECATED** in a future release of the standard.

430 Appears in the documents in the following form: **DEPRECATION WARNING** .

431 ***Device***

432 A part of an information model representing a piece of equipment.

433 Used in an XML representation of a *Response Document*:

- 434 • When used as an XML container to organize *Device* elements.
435 Appears in the documents in the following form: *Devices*.
- 436 • When used as an XML container to represent a specific piece of equipment and
437 is composed of a set of *Structural Elements* that organize and provide relevance
438 to data published from that piece of equipment.
439 Appears in the documents in the following form: *Device*.

440 ***Devices Information Model***

441 A set of rules and terms that describes the physical and logical configuration for a
442 piece of equipment and the data that may be reported by that equipment.

443 Appears in the documents in the following form: *Devices Information Model*.

444 ***Document***

445 General meaning:

446 A piece of written, printed, or electronic matter that provides information.

447 Used to represent an *MTCConnect Document*:

448 Refers to printed or electronic document(s) that represent a *Part(s)* of the *MTCCon-*
449 *nect Standard*.

450 Appears in the documents in the following form: *MTCConnect Document*.

451 Used to represent a specific representation of an *MTCConnect Document*:

452 Refers to electronic document(s) associated with an *Agent* that are encoded using
453 *XML*; *Response Documents* or *Asset Documents*.

454 Appears in the documents in the following form: *MTCConnect XML Document*.

455 Used to describe types of information stored in an *Agent*:

456 In an implementation, the electronic documents that are published from a data source
457 and stored by an *Agent*.

458 Appears in the documents in the following form: *Asset Document*.

459 Used to describe information published by an Agent:

460 A document published by an *Agent* based upon one of the *semantic data models*
461 defined in the MTCConnect Standard in response to a request from a client.

462 Appears in the documents in the following form: *Response Document*.

463 ***Document Body***

464 The portion of the content of an *MTCConnect Response Document* that is defined
465 by the relative *MTCConnect Information Model*. The *Document Body* contains the
466 *Structural Elements* and *Data Entities* reported in a *Response Document*.

467 Appears in the documents in the following form: *Document Body*.

468 ***Document Header***

469 The portion of the content of an *MTCConnect Response Document* that provides infor-
470 mation from an *Agent* defining version information, storage capacity, protocol, and
471 other information associated with the management of the data stored in or retrieved
472 from the *Agent*.

473 Appears in the documents in the following form: *Document Header*.

474 ***Element***

475 Refers to an XML element.

476 An XML element is a logical portion of an XML document or schema that begins
477 with a `start-tag` and ends with a corresponding `end-tag`.

478 The information provided between the `start-tag` and `end-tag` may contain
479 attributes, other elements (sub-elements), and/or CDATA.

480 Note: Also, an XML element may consist of an `empty-element tag`. Refer
481 to *Appendix B* for more information on element tags.

482 Appears in the documents in the following form: `element`.

483 ***Element Name***

484 A descriptive identifier contained in both the `start-tag` and `end-tag` of an
485 XML element that provides the name of the element.

486 Appears in the documents in the following form: `element name`.

487 Used to describe the name for a specific XML element:

488 Reference to the name provided in the `start-tag`, `end-tag`, or `empty-element`
489 `tag` for an XML element.

490 Appears in the documents in the following form: *Element Name*.

491 ***engineering units***

492 A quantity, dimension, or magnitude used in engineering adopted as a standard in
 493 terms of which the magnitude of other quantities of the same kind can be expressed
 494 or calculated.

495 ***Equipment***

496 Represents anything that can publish information and is used in the operations of a
 497 manufacturing facility shop floor. Examples of equipment are machine tools, ovens,
 498 sensor units, workstations, software applications, and bar feeders.

499 Appears in the documents in the following form: equipment or piece of equipment.

500 ***Equipment Metadata***

501 See *Metadata*

502 ***Error Information Model***

503 The rules and terminology that describes the *Response Document* returned by an
 504 *Agent* when it encounters an error while interpreting a *Request* for information from
 505 a client software application or when an *Agent* experiences an error while publishing
 506 the *Response* to a *Request* for information.

507 Appears in the documents in the following form: *Error Information Model*.

508 ***Event***

509 General meaning:

510 The occurrence of something that happens or takes place.

511 Appears in the documents in the following form: event.

512 Used as a type of *Data Entity*:

513 An identification that represents a change in state of information associated with a
 514 piece of equipment or an occurrence of an action. Event also provides a means to
 515 publish a message from a piece of equipment.

516 Appears in the documents in the following form: *Event*.

517 Used as a category attribute for a *Data Entity*:

518 Used as a value for the category attribute for an XML `DataItem` element.

519 Appears in the documents in the following form: `EVENT`.

520 Used as an XML container or element:

- 521 ● When used as an XML container that consists of one or more types of `Event`
 522 XML elements.

523 Appears in the documents in the following form: `Events`.

- 524 • When used as an abstract XML element. It is replaced in the XML document
525 by types of `Event` elements.
526 Appears in the documents in the following form: `Event`.

527 ***Extensible***

528 The ability for an implementer to extend *MTConnect Information Models* by adding
529 content not currently addressed in the MTConnect Standard.

530 ***Fault State***

531 In the MTConnect Standard, a term that indicates the reported status of a *Condition*
532 category *Data Entity*.

533 Appears in the documents in the following form: *Fault State*.

534 ***heartbeat***

535 General meaning:

536 A function that indicates to a client application that the communications connection
537 to an *Agent* is still viable during times when there is no new data available to report
538 often referred to as a "keep alive" message.

539 Appears in the documents in the following form: *heartbeat*.

540 When used as part of an *HTTP Request*:

541 The form `heartbeat` is used as a parameter in the query portion of an *HTTP*
542 *Request Line*.

543 Appears in the documents in the following form: `heartbeat`.

544 ***Higher Level***

545 A nested element that is above a lower level element.

546 ***HTTP Error Message***

547 In the MTConnect Standard, a response provided by an *Agent* indicating that an
548 *HTTP Request* is incorrectly formatted or identifies that the requested data is not
549 available from the *Agent*.

550 Appears in the documents in the following form: *HTTP Error Message*.

551 ***HTTP Header***

552 In the MTConnect Standard, the content of the *Header* portion of either an *HTTP*
553 *Request* from a client software application or an *HTTP Response* from an *Agent*.

554 Appears in the documents in the following form: *HTTP Header*.

555 HTTP Method

556 In the MTConnect Standard, a portion of a command in an *HTTP Request* that indi-
557 cates the desired action to be performed on the identified resource; often referred to
558 as verbs.

559 HTTP Request

560 In the MTConnect Standard, a communications command issued by a client soft-
561 ware application to an *Agent* requesting information defined in the *HTTP Request*
562 *Line*.

563 Appears in the documents in the following form: *HTTP Request*.

564 HTTP Request Line

565 In the MTConnect Standard, the first line of an *HTTP Request* describing a specific
566 *Response Document* to be published by an *Agent*.

567 Appears in the documents in the following form: *HTTP Request Line*.

568 HTTP Response

569 In the MTConnect Standard, the information published from an *Agent* in reply to
570 an *HTTP Request*. An *HTTP Response* may be either a *Response Document* or an
571 *HTTP Error Message*.

572 Appears in the documents in the following form: *HTTP Response*.

573 HTTP Server

574 In the MTConnect Standard, a software program that accepts *HTTP Requests* from
575 client software applications and publishes *HTTP Responses* as a reply to those *Re-*
576 *quests*.

577 Appears in the documents in the following form: *HTTP Server*.

578 HTTP Status Code

579 In the MTConnect Standard, a numeric code contained in an *HTTP Response* that
580 defines a status category associated with the *Response* either as a success status or a
581 category of an HTTP error.

582 Appears in the documents in the following form: *HTTP Status Code*.

583 id

584 General meaning:

585 An identifier used to distinguish a piece of information.

586 Appears in the documents in the following form: id.

587 Used as an XML attribute:

588 When used as an attribute for an XML element - *Structural Element*, *Data Entity*, or
 589 *Asset*. *id* provides a unique identity for the element within an XML document.

590 Appears in the documents in the following form: *id*.

591 ***Implementation***

592 A specific instantiation of the MTConnect Standard.

593 ***Information Model***

594 The rules, relationships, and terminology that are used to define how information is
 595 structured.

596 For example, an information model is used to define the structure for each *MTCon-*
 597 *nect Response Document*; the definition of each piece of information within those
 598 documents and the relationship between pieces of information.

599 Appears in the documents in the following form: *Information Model*.

600 ***instance***

601 Describes a set of *Streaming Data* in an *Agent*. Each time an *Agent* is restarted with
 602 an empty *buffer*, data placed in the *buffer* represents a new *instance* of the *Agent*.

603 Appears in the documents in the following form: *instance*.

604 ***Interaction Model***

605 The definition of information exchanged to support the interactions between pieces
 606 of equipment collaborating to complete a task.

607 Appears in the documents in the following form: *Interaction Model*.

608 ***Interface***

609 General meaning:

610 The exchange of information between pieces of equipment and/or software systems.

611 Appears in the documents in the following form: *interface*.

612 Used as an *Interaction Model*:

613 An *Interaction Model* that describes a method for inter-operations between pieces
 614 of equipment.

615 Appears in the documents in the following form: *Interface*.

616 Used as an XML container or element:

617 - When used as an XML container that consists of one or more types of Inter-
 618 face XML elements.

619 Appears in the documents in the following form: *Interfaces*.

620 - When used as an abstract XML element. It is replaced in the XML document
621 by types of `Interface` elements.

622 Appears in the documents in the following form: `Interface`

623 ***key***

624 A unique identifier in a *key-value pair* association.

625 ***key-value pair***

626 An association between an identifier referred to as the *key* and a value which taken
627 together create a *key-value pair*. When used in a set of *key-value pairs* each *key* is
628 unique and will only have one value associated with it at any point in time.

629 ***Lower Level***

630 A nested element that is below a higher level element.

631 ***Message***

632 General meaning:

633 The content of a communication process.

634 Appears in the documents in the following form: `message`.

635 Used relative to an *Agent*:

636 Describes the information that is exchanged between an *Agent* and a client soft-
637 ware application. A *Message* may contain either a *Request* from a client software
638 application or a *Response* from an *Agent*.

639 Appears in the documents in the following form: *Message*.

640 Used as a type of *Data Entity*:

641 Describes a type of *Data Entity* in the *Devices Information Model* that can contain
642 any text string of information or native code to be transferred from a piece of equip-
643 ment.

644 Appears in the documents in the following form: `MESSAGE`.

645 Used as an Element Name:

646 An *Element Name* for a *Data Entity* in the *Streams Information Model* that can
647 contain any text string of information or native code to be transferred from a piece
648 of equipment.

649 Appears in the documents in the following form: `Message`.

650 ***Metadata***

651 Data that provides information about other data.

652 For example, *Equipment Metadata* defines both the *Structural Elements* that rep-
653 resent the physical and logical parts and sub-parts of each piece of equipment, the
654 relationships between those parts and sub-parts, and the definitions of the *Data En-*
655 *tities* associated with that piece of equipment.

656 Appears in the documents in the following form: *Metadata* or *Equipment Metadata*.

657 ***MTCConnect Agent***

658 See definition for *Agent*.

659 ***MTCConnect Document***

660 See *Document*.

661 ***MTCConnect Request***

662 A communication request for information issued from a client software application
663 to an *Agent*.

664 Appears in the documents in the following form: *MTCConnect Request*.

665 ***MTCConnect XML Document***

666 See *Document*.

667 ***MTCConnectAssets Response Document***

668 An electronic document published by an *Agent* in response to a *Request* for infor-
669 mation from a client software application relating to *MTCConnect Assets*.

670 Appears in the documents in the following form: *MTCConnectAssets Response Doc-*
671 *ument*.

672 ***MTCConnectDevices Response Document***

673 An electronic document published by an *Agent* in response to a *Request* for infor-
674 mation from a client software application that includes *Metadata* for one or more
675 pieces of equipment.

676 Appears in the documents in the following form: *MTCConnectDevices Response*
677 *Document*.

678 ***MTCConnectErrors Response Document***

679 An electronic document published by an *Agent* whenever it encounters an error
680 while interpreting a *Request* for information from a client software application or
681 when an *Agent* experiences an error while publishing the *Response* to a *Request* for
682 information.

683 Appears in the documents in the following form: *MtConnectErrors Response Doc-*
684 *ument.*

685 ***MtConnectStreams Response Document***

686 An electronic document published by an *Agent* in response to a *Request* for infor-
687 mation from a client software application that includes *Streaming Data* from the
688 *Agent*.

689 Appears in the documents in the following form: *MtConnectStreams Response*
690 *Document.*

691 ***observable***

692 A quality, property, or characteristic that can be observed.

693 ***observation***

694 The observed value of a property at a point in time.

695 ***observe***

696 The act of measuring or determining the value of a property at a point in time.

697 ***organize***

698 The act of containing and owning one or more elements.

699 ***organizer***

700 An element that contains and owns one or more elements.

701 ***parameter***

702 General Meaning:

703 A variable that must be given a value during the execution of a program or a com-
704 munications command.

705 When used as part of an *HTTP Request*:

706 Represents the content (keys and associated values) provided in the *Query* portion
707 of an *HTTP Request Line* that identifies specific information to be returned in a
708 *Response Document*.

709 Appears in the documents in the following form: parameter.

710 ***Parent Element***

711 An XML element used to organize *Lower Level* child elements that share a common
712 relationship to the *Parent Element*.

713 Appears in the documents in the following form: *Parent Element*.

714 **Persistence**

715 A method for retaining or restoring information.

716 **Probe**717 General meaning of a physical entity:718 An instrument commonly used for measuring the physical geometrical characteristics of an object.
719720 • Used to describe a measurement device:721 The form probe is used to define a measurement device that provides position information.
722

723 Appears in the documents in the following form: probe.

724 • Used within a *Data Entity*:725 The form PROBE is used to designate a subtype for the *Data Entity* PATH_–
726 POSITION indicating a measurement position relating to a probe unit.

727 Appears in the documents in the following form: PROBE.

728 General meaning for communications with an *Agent*:

729 Probe is used to define a type of communication request.

730 • Used as a type of communication request:731 The form *Probe Request* represents a specific type of communications request
732 between a client software application and an *Agent* regarding *Metadata* for one
733 or more pieces of equipment.734 Appears in the documents in the following form: *Probe Request*.735 • Used in an *HTTP Request Line*:736 The form probe is used to designate a *Probe Request* in the <Path> portion
737 of an *HTTP Request Line*.

738 Appears in the documents in the following form: probe.

739 **Protocol**740 A set of rules that allow two or more entities to transmit information from one to the
741 other.742 **Publish/Subscribe**743 In the MTConnect Standard, a communications messaging pattern that may be used
744 to publish *Streaming Data* from an *Agent*. When a *Publish/Subscribe* communi-
745 cation method is established between a client software application and an *Agent*,

746 the *Agent* will repeatedly publish a specific `MTCConnectStreams` document at a
747 defined period.

748 Appears in the documents in the following form: *Publish/Subscribe*.

749 **Query**

750 General Meaning:

751 A portion of a request for information that more precisely defines the specific infor-
752 mation to be published in response to the request.

753 Appears in the documents in the following form: *Query*.

754 Used in an HTTP Request Line:

755 The form `query` includes a string of parameters that define filters used to refine the
756 content of a *Response Document* published in response to an *HTTP Request*.

757 Appears in the documents in the following form: `query`.

758 **Reference**

759 *Reference* is a pointer to information that is associated with another *Structural Ele-*
760 *ment*.

761 **Request**

762 A communications method where a client software application transmits a message
763 to an *Agent*. That message instructs the *Agent* to respond with specific information.

764 Appears in the documents in the following form: *Request*.

765 **Request/Response**

766 A communications pattern that supports the transfer of information between an
767 *Agent* and a client software application. In a *Request/Response* information ex-
768 change, a client software application requests specific information from an *Agent*.
769 An *Agent* responds to the *Request* by publishing a *Response Document*.

770 Appears in the documents in the following form: *Request/Response*.

771 **Requester**

772 An entity that initiates a *Request* for information in a communications exchange.

773 Appears in the documents in the following form: *Requester*.

774 **reset**

775 A reset is associated with an occurrence of a *Data Entity* indicated by the `reset-`
776 `Triggered` attribute. When a reset occurs, the accumulated value or statistic are
777 reverted back to their initial value. A *Data Entity* with a *Data Set* representation
778 removes all *key-value pairs*, setting the *Data Set* to an empty set.

779 ***Responder***780 An entity that responds to a *Request* for information in a communications exchange.781 Appears in the documents in the following form: *Responder*.782 ***Response Document***783 See *Document*.784 ***Root Element***785 The first *Structural Element* provided in a *Response Document* encoded using XML.786 The *Root Element* is an XML container and is the *Parent Element* for all other XML787 elements in the document. The *Root Element* appears immediately following the

788 XML Declaration.

789 Appears in the documents in the following form: *Root Element*.790 ***Sample***791 General meaning:

792 The collection of one or more pieces of information.

793 Used when referring to the collection of information:

794 When referring to the collection of a piece of information from a data source.

795 Appears in the documents in the following form: *sample*.796 Used as an *MTConnect Request*:

797 When representing a specific type of communications request between a client soft-

798 ware application and an *Agent* regarding *Streaming Data*.799 Appears in the documents in the following form: *Sample Request*.800 Used as part of an *HTTP Request*:801 Used in the `path` portion of an *HTTP Request Line*, by a client software applica-802 tion, to initiate a *Sample Request* to an *Agent* to publish an `MTConnectStreams`

803 document.

804 Appears in the documents in the following form: `sample`.805 Used to describe a *Data Entity*:806 Used to define a specific type of *Data Entity*. A *Sample* type *Data Entity* reports the

807 value for a continuously variable or analog piece of information.

808 Appears in the documents in the following form: *Sample* or *Samples*.809 Used as an XML container or element:

- 810 • When used as an XML container that consists of one or more types of Sample
811 XML elements.
812 Appears in the documents in the following form: *Samples*.
813 • When used as an abstract XML element. It is replaced in the XML document
814 by types of *Sample* elements representing individual *Sample* type of *Data*
815 *Entity*.
816 Appears in the documents in the following form: *Sample*.

817 ***Sample Request***

818 A request from the *Agent* for a stream of time series data.

819 ***schema***

820 General meaning:

821 The definition of the structure, rules, and vocabularies used to define the information
822 published in an electronic document.

823 Appears in the documents in the following form: *schema*.

824 Used in association with an *MTConnect Response Document*:

825 Identifies a specific schema defined for an *MTConnect Response Document*.

826 Appears in the documents in the following form: *schema*.

827 ***semantic data model***

828 A methodology for defining the structure and meaning for data in a specific logical
829 way.

830 It provides the rules for encoding electronic information such that it can be inter-
831 preted by a software system.

832 Appears in the documents in the following form: *semantic data model*.

833 ***sequence number***

834 The primary key identifier used to manage and locate a specific piece of *Streaming*
835 *Data* in an *Agent*.

836 *sequence number* is a monotonically increasing number within an instance of an
837 *Agent*.

838 Appears in the documents in the following form: *sequence number*.

839 ***Standard***

840 General meaning:

841 A document established by consensus that provides rules, guidelines, or character-
842 istics for activities or their results (as defined in ISO/IEC Guide 2:2004).

843 Used when referring to the MTConnect Standard:

844 The MTConnect Standard is a standard that provides the definition and semantic
845 data structure for information published by pieces of equipment.

846 Appears in the documents in the following form: Standard or MTConnect Standard.

847 ***Streaming Data***

848 The values published by a piece of equipment for the *Data Entities* defined by the
849 *Equipment Metadata*.

850 Appears in the documents in the following form: *Streaming Data*.

851 ***Streams Information Model***

852 The rules and terminology (*semantic data model*) that describes the *Streaming Data*
853 returned by an *Agent* from a piece of equipment in response to a *Sample Request* or
854 a *Current Request*.

855 Appears in the documents in the following form: *Streams Information Model*.

856 ***Structural Element***

857 General meaning:

858 An XML element that organizes information that represents the physical and logical
859 parts and sub-parts of a piece of equipment.

860 Appears in the documents in the following form: *Structural Element*.

861 Used to indicate hierarchy of Components:

862 When used to describe a primary physical or logical construct within a piece of
863 equipment.

864 Appears in the documents in the following form: *Top Level Structural Element*.

865 When used to indicate a *Child Element* which provides additional detail describing
866 the physical or logical structure of a *Top Level Structural Element*.

867 Appears in the documents in the following form: *Lower Level Structural Element*.

868 ***subtype***

869 General meaning:

870 A secondary or subordinate type of categorization or classification of information.

871 In software and data modeling, a subtype is a type of data that is related to another
872 higher-level type of data.

873 Appears in the documents in the following form: subtype.

874 Used as an attribute for a *Data Entity*:

875 Used as an attribute that provides a sub-categorization for the `type` attribute for a
876 piece of information.

877 Appears in the documents in the following form: `subType`.

878 **Table**

879 A two dimensional set of values given by a set of *key-value pairs Table Entries*.
880 Each *Table Entry* contains a set of *key-value pairs of Table Cells*. The `Entry` and
881 `Cell` elements comprise a tabular representation of the information.

882 **Table Cell**

883 A subdivision of a *Table Entry* representing a singular value.

884 **Table Entry**

885 A subdivision of a *Table* containing a set of *key-value pairs* representing *Table Cells*.

886 **time stamp**

887 General meaning:

888 The best available estimate of the time that the value(s) for published or recorded
889 information was measured or determined.

890 Appears in the documents as "time stamp".

891 Used as an attribute for recorded or published data:

892 An attribute that identifies the time associated with a *Data Entity* as stored in an
893 *Agent*.

894 Appears in the documents in the following form: `timestamp`.

895 **Top Level**

896 *Structural Elements* that represent the most significant physical or logical functions
897 of a piece of equipment.

898 **type**

899 General meaning:

900 A classification or categorization of information.

901 In software and data modeling, a type is a grouping function to identify pieces of
902 information that share common characteristics.

903 Appears in the documents in the following form: `type`.

904 Used as an attribute for a *Data Entity*:

905 Used as an attribute that provides a categorization for piece of information that share
906 common characteristics.

907 Appears in the documents in the following form: `type`.

908 ***Valid Data Value***

909 One or more acceptable values or constrained values that can be reported for a *Data*
910 *Entity*.

911 Appears in the documents in the following form: *Valid Data Value(s)*.

912 **WARNING**

913 General Meaning:

914 A statement or action that indicates a possible danger, problem, or other unexpected
915 situation.

916 Used relative to changes in an *MTConnect Document*:

917 Used to indicate that specific content in an *MTConnect Document* may be changed
918 in a future release of the standard.

919 Appears in the documents in the following form: **WARNING** .

920 Used as a *Valid Data Value* for a *Condition*:

921 Used as a *Valid Data Value* for a *Condition* type *Data Entity*.

922 Appears in the documents in the following form: WARNING.

923 Used as an *Element Name* for a *Data Entity*:

924 Used as the *Element Name* for a *Condition* type *Data Entity* in an *MTConnect-*
925 *Streams Response Document*.

926 Appears in the documents in the following form: Warning.

927 ***XML Container***

928 In the MTConnect Standard, a type of XML element.

929 An XML container is used to organize other XML elements that are logically related
930 to each other. A container may have either *Data Entities* or other *Structural Elements*
931 as *Child Elements*.

932 ***XML Document***

933 An XML document is a structured text file encoded using XML.

934 An XML document is an instantiation of an XML schema. It has a single root XML
935 element, conforms to the XML specification, and is structured based upon a specific
936 schema.

937 *MTConnect Response Documents* may be encoded as an XML document.

938 ***XML Schema***

939 In the MTConnect Standard, an instantiation of a schema defining a specific docu-
940 ment encoded in XML.

941 **3.2 MTConnect References**

- 942 [MTConnect Part 1.0] *MTConnect Standard Part 1.0 - Overview and Fundamentals*. Ver-
943 sion 1.5.0.
- 944 [MTConnect Part 2.0] *MTConnect Standard: Part 2.0 - Devices Information Model*. Ver-
945 sion 1.5.0.
- 946 [MTConnect Part 3.0] *MTConnect Standard: Part 3.0 - Streams Information Model*. Ver-
947 sion 1.5.0.
- 948 [MTConnect Part 4.0] *MTConnect Standard: Part 4.0 - Assets Information Model*. Ver-
949 sion 1.5.0.
- 950 [MTConnect Part 5.0] *MTConnect Standard: Part 5.0 - Interfaces*. Version 1.5.0.

951 **4 MTConnect Standard**

952 The MTConnect Standard is organized in a series of documents (also referred to as MT-
953 Connect Documents) that each address a specific set of requirements defined by the Stan-
954 dard. Each MTConnect Document will be referred to as a *Part* of the Standard; e.g.,
955 *MTConnect Standard Part 1.0 - Overview and Fundamentals*. Together, these documents
956 describe the *Base Functional Structure* specified in the MTConnect Standard.

957 Implementation of any manufacturing data management system may utilize information
958 from any number of these documents. However, it is not necessary to realize all informa-
959 tion contained in these documents for any one specific implementation.

960 **4.1 MTConnect Documents Organization**

961 The MTConnect specification is organized into the following documents:

962 *MTConnect Standard Part 1.0 - Overview and Fundamentals*: Provides an overview of
963 the MTConnect Standard and defines the terminology and structure used throughout all
964 documents associated with the Standard. Additionally, [MTConnect Part 1.0] describes
965 the functions provided by an *Agent* and the protocol used to communicate with an *Agent*.

966 *MTConnect Standard: Part 2.0 - Devices Information Model*: Defines the *semantic data*
967 *model* that describes the data that can be supplied by a piece of equipment. This model
968 details the XML elements used to describe the structural and logical configuration for a
969 piece of equipment. It also describes each type of data that may be supplied by a piece of
970 equipment in a manufacturing operation.

971 *MTConnect Standard: Part 3.0 - Streams Information Model*: Defines the *semantic data*
972 *model* that organizes the data that is collected from a piece of equipment and transferred
973 to a client software application from an *Agent*.

974 *MTConnect Standard: Part 4.0 - Assets Information Model*: Provides an overview of *MT-*
975 *Connect Assets* and the functions provided by an *Agent* to communicate information relat-
976 ing to *Assets*. The various *semantic data models* describing each type of *MTConnect Asset*
977 are defined in sub-*Part* documents (*Part 4.x*) of the MTConnect Standard.

978 *MTConnect Standard: Part 5.0 - Interfaces*: Defines the MTConnect implementation of
979 the *Interaction Model* used to coordinate actions between pieces of equipment used in
980 manufacturing systems.

981 4.2 MTConnect Document Versioning

982 The MTConnect Standard will be periodically updated with new and expanded function-
983 ality. Each new release of the Standard will include additional content adding new func-
984 tionality and/or extensions to the *semantic data models* defined in the Standard.

985 The MTConnect Standard uses a three-digit version numbering system to identify each
986 release of the Standard that indicates the progression of enhancements to the Standard. The
987 format used to identify the documents in a specific version of the MTConnect Standard is:

988 *major.minor.revision*

989 *major* – Identifier representing a consistent set of functionalities defined by the MTCon-
990 nect Standard. This functionality includes the protocol(s) used to communicate data to a
991 client software application, the *semantic data models* defining how that data is organized
992 into *Response Documents*, and the encoding of those *Response Documents*. This set of
993 functionalities is referred to as the *Base Functional Structure*.

994 When a release of the MTConnect Standard removes or modifies any of the protocol(s),
995 *semantic data models*, or encoding of the *Response Documents* included in the *Base Func-*
996 *tional Structure* in such a way that it breaks backward compatibility and a client software
997 application can no longer communicate with an *Agent* or cannot interpret the information
998 provided by an *Agent*, the *major* version identifier for the Documents in the release is
999 revised to a successively higher number.

1000 See *Section 4.5 - Backwards Compatibility* for details regarding the interaction between a
1001 client software application and versions of the MTConnect Standard.

1002 *minor* – Identifier representing a specific set of functionalities defined by the MTConnect
1003 Standard. Each release of the Standard (with a common *major* version identifier) includes
1004 new and/or expanded functionality – protocol extensions, new or extended *semantic data*
1005 *models*, and/or new programming languages. Each of these releases of the Standard is
1006 indicated by a successively higher *minor* version identifier.

1007 If a new *major* version of the MTConnect Standard is released, the *minor* version identifier
1008 will be reset to 0.

1009 *revision* – A supplemental identifier representing only organizational or editorial changes
1010 to a *minor* version document with no changes in the functionality described in that docu-
1011 ment.

1012 New releases of a specific document are indicated by a successively higher revision version
1013 identifier.

1014 If a new *minor* version of a document is released, the *revision* identifier will be reset to 0.

1015 An example of the version identifier for a specific document would be:

Version M.N.R

1016 **4.2.1 Document Releases**

1017 A *major* revision change represents a substantial change to the MTConnect Standard. At
1018 the time of a *major* revision change, all documents representing the MTConnect Standard
1019 will be updated and released together.

1020 A *minor* revision change represents some level of extended functionality supported by the
1021 MTConnect Standard. At the time of a *minor* version release, MTConnect Documents
1022 representing the changes or enhancements to the Standard will be updated as required.
1023 However, all documents, whether updated or not, will be released together with a new
1024 *minor* version number. Providing all documents at a common *major* and *minor* version
1025 makes it easier for implementers to manage the compatibility and upgrade of the different
1026 software tools incorporated into a manufacturing software system.

1027 Since a *revision* represents no functional changes to the MTConnect Standard and includes
1028 only editorial or descriptive changes that enhance the understanding of the functionality
1029 supported by the Standard, individual documents within the Standard may be released
1030 at any time with a new *revision* and that release does not impact any other documents
1031 associated with the MTConnect Standard.

1032 The latest released version of each document provided for the MTConnect Standard, and
1033 historical releases of those documents, are provided at <http://www.mtconnect.org>.

1034 4.3 MTConnect Document Naming Conventions

1035 MTConnect Documents are identified as follows:

1036 4.3.1 Document Title

1037 Each MTConnect Document **MUST** be identified as follows:

MTConnect® Standard

Part ## - *Title*

Version M.N.R.

1038 The following keys are used to distinguish different *Parts* of the MTConnect Standard and
1039 the version of the MTConnect Document:

1040 ## – Identifier of the specific Part and sub-*Part* of the MTConnect Standard

1041 Title – Description of the type of information contained in the MTConnect Document

1042 M – Indicator of the *major* version of the MTConnect Document

1043 N– Indicator of the *minor* version of the MTConnect Document

1044 R – Indicator of the revision of the MTConnect Document

1045 For example, a release of *MTConnect Standard: Part 2.0 - Devices Information Model*
1046 would be:

MTConnect® Standard

Part 2.0 - *Devices Information Model*

Version 1.2.0

1047 4.3.2 Electronic Document File Naming

1048 Electronic versions of the MTConnect Documents will be provided in PDF format and
1049 follow this naming convention:

1050 MTC_Part#-#_Title_M-N-R.pdf

1051 The electronic version of the same release of *MTCConnect Standard: Part 2.0 - Devices*
1052 *Information Model* would be:

1053 MTC_Part_2-0_Devices_Information_Model_1-2-0.pdf

1054 **4.4 Document Conventions**

1055 Additional information regarding specific content in the MTCConnect Standard is provided
1056 in the sections below.

1057 **4.4.1 Use of MUST, SHOULD, and MAY**

1058 These words convey specific meaning in the MTCConnect Standard when presented in cap-
1059 ital letters, Times New Roman font, and a Bold font style.

- 1060 • The word **MUST** indicates content that is mandatory to be provided in an imple-
1061 mentation where indicated.
- 1062 • The word **SHOULD** indicates content that is recommended, but the exclusion of
1063 which will not invalidate an implementation.
- 1064 • The word **MAY** indicates content that is optional. It is up to the implementer to
1065 decide if the content is relevant to an implementation.
- 1066 • The word **NOT** may be added to the words **MUST** or **SHOULD** to negate the re-
1067 quirement.

1068 **4.4.2 Text Conventions**

1069 The following conventions will be used throughout the MTCConnect Documents to provide
1070 a clear and consistent understanding of the use of each type of information used to define
1071 the MTCConnect Standard.

1072 These conventions are:

- 1073 • Standard text is provided in Times New Roman font.

- 1074 • References to documents, sections or sub-sections of a document, or figures within a
 1075 document are *italicized*; e.g., *MTConnect Standard: Part 2.0 - Devices Information*
 1076 *Model*.
- 1077 • Terms with a specific meaning in the MTConnect Standard will be *italicized*; e.g.,
 1078 *major* indicating a version of the Standard.
- 1079 • When these same terms are used within the text without specific reference to their
 1080 function within the MTConnect Standard, they will be provided as non-italicized
 1081 font; e.g., *major* indicating a descriptor of another term.
- 1082 • Terms representing content of an MTConnect *semantic data model* or the protocol
 1083 used in MTConnect will be provided in fixed size, Courier New font; e.g., `comp-`
 1084 `onent`, `probe`, `current`.
- 1085 When these same terms are used within the text without specific reference to
 1086 their function within the MTConnect Standard, they will be provided as Times New
 1087 Roman font.
- 1088 • All *Valid Data Values* that are restricted to a limited or controlled vocabulary will be
 1089 provided in upper case Courier New font with an `_`(underscore) separating words.
 1090 For example: `ON`, `OFF`, `ACTUAL`, `COUNTER_CLOCKWISE`, etc.
- 1091 • All descriptive attributes associated with each piece of data defined in a *Response*
 1092 *Document* will be provided in Courier New font and camel case font style. For
 1093 example: `nativeUnits`.

1094 4.4.3 Code Line Syntax and Conventions

1095 The following conventions will be used throughout the MTConnect Documents to describe
 1096 examples of software code produced by an *Agent* or commands provided to an *Agent* from
 1097 a client software application.

1098 All examples are provided in fixed size Courier New font with line numbers.

1099 These conventions are:

- 1100 • XML Code examples:

Example 1: XML Code Examples

```

1101     1 <MTConnectStreams xmlns:m="urn:mtconnect.com:
1102     2   MTConnectStreams:1.1" xmlns:xsi=
1103     3   "http://www.w3.org/2001/XMLSchema-instance"
1104     4   xmlns="urn:mtconnect.com:MTConnectStreams:1.1"
  
```

- 1105 • HTTP URL examples:
- 1106 – http://<authority>/<path>[?<query>]When a portion of a URL is enclosed in
1107 angle brackets ("<" and ">"), that section of the URL is a place holder for
1108 specific information that will replace the term between the angle brackets.
- 1109 Note: The angle brackets in a URL do not relate to the angle brackets
1110 used as the `tag` elements in an XML example.
- 1111 – A portion of a URL that is enclosed in square brackets "[" and "]" indicates
1112 that the enclosed content is optional.
- 1113 – All other characters in the URL are literal.

1114 4.4.4 Semantic Data Model Content

1115 For each of the *semantic data models* defined in the MTConnect Standard, there are tables
1116 describing pieces of information provided in the data models. Each table has a column
1117 labeled *Occurrence*. *Occurrence* defines the number of times the content defined in the
1118 tables **MAY** be provided in the usage case specified.

- 1119 • If the *Occurrence* is 1, the content **MUST** be provided.
- 1120 • If the *Occurrence* is 0..1, the content **MAY** be provided and if provided, at most,
1121 only one occurrence of the content **MUST** be provided.
- 1122 • If the *Occurrence* is 0..*, the content **MAY** be provided and any number of occur-
1123 rences of the content **MAY** be provided.
- 1124 • If the *Occurrence* is 1..*, one or more occurrences of the content **MUST** be pro-
1125 vided.
- 1126 • If the *Occurrence* is a number, e.g., 2, exactly that number of occurrences of the
1127 content **MUST** be provided.

1128 Note: "*" indicates multiple number of occurrences and is represented by ∞ in the
1129 figures.

1130 4.4.5 Referenced Standards and Specifications

1131 Other standards and specifications may be used to describe aspects of the protocol, *data*
1132 *dictionary*, or *semantic data models* defined in the MTConnect Standard. When a spe-

1133 cific standard or specification is referenced in the MTConnect Standard, the name of the
1134 standard or specification will be provided in *italicized* font.

1135 See *Section 3 - Terminology and Conventions: Bibliography* for a complete listing of
1136 standards and specifications used or referenced in the MTConnect Standard.

1137 **4.4.6 Deprecation and Deprecation Warnings**

1138 When the MTConnect Institute adds new functionality to the MTConnect Standard, the
1139 new content may supersede some of the functionality of existing content or significantly
1140 enhance one of the *semantic data models*. When this occurs, existing content may no
1141 longer be valid for use in the new version of the Standard.

1142 **4.4.6.1 Deprecation**

1143 In cases when new content supersedes the functionality of the existing content, the original
1144 content **MUST** no longer be included in future implementations – only the new content
1145 should be used.

1146 The superseded content is identified by striking through the original content (~~original
1147 content~~) and marking the content with the words "**DEPRECATED** in *Version M.N*".

1148 The deprecated content must remain in all future *minor* versions of the document. The
1149 content may be removed when a *major* version update is released. This provides imple-
1150 menter's guidance on how to interpret data that may be provided from equipment utilizing
1151 an older version of the Standard. This content provides the information required for imple-
1152 menter's to develop software applications that support backwards compatibility with older
1153 versions of the standard.

1154 A software application may be designed to be compliant with any specific *minor* version
1155 of the standard. That software application may be collecting data from many different
1156 pieces of equipment. Each of these pieces of equipment may be providing data defined
1157 by the current version or any of the previous *minor* versions of the standard. To maintain
1158 compatibility with existing pieces of equipment, software applications should be imple-
1159 mented to interpret data defined in the current release of the MTConnect Standard, as well
1160 as all deprecated content associated with earlier versions of the Standard.

1161 **4.4.6.2 Deprecation Warning**

1162 When new content provides improved alternatives for defining the *semantic data mod-*

1163 *els*, the MTConnect Institute may determine that the original content could possibly be
1164 deprecated in the future. When this occurs, a content will be marked with the words
1165 "**DEPRECATION WARNING** " to identify the content that may be deprecated in the
1166 future. This provides advanced notice to implementers that they should choose to utilize
1167 the improved alternatives when developing new products or software systems to avoid the
1168 possibility that the original content may be deprecated in a future version of the Standard.

1169 4.5 Backwards Compatibility

1170 MTConnect Documents with a different *major* version identifier represent a significant
1171 change in the *Base Functional Structure* of the MTConnect Standard. This means that
1172 the schema or protocol defined by the Standard may have changed in ways that will re-
1173 quire software applications to change how they request and/or interpret data received from
1174 an *Agent*. Software applications should be fully version aware since no assumption of
1175 backwards compatibility should be assumed at the time of a *major* revision change to the
1176 MTConnect Standard.

1177 The MTConnect Institute strives to maintain version compatibility through all *minor* re-
1178 visions of the MTConnect Standard. New *minor* versions may introduce extensions to
1179 existing *semantic data models*, extend the protocol used to communicate to the *Agent*,
1180 and/or add new *semantic data models* to extend the functionality of the Standard. Client
1181 software applications may be designed to be compliant with any specific *minor* version
1182 of the MTConnect Standard. Additionally, software applications should be capable of in-
1183 terpreting information from an *Agent* providing data based upon a lower *minor* version
1184 identifier. It should also be capable of interpreting information from an *Agent* providing
1185 data based upon a higher *minor* version identifier of the MTConnect Standard than the
1186 version supported by the client, even though the client may ignore or not be capable of
1187 interpreting the extended content provided by the *Agent*.

1188 A *revision* version of any MTConnect Document provides only editorial changes requiring
1189 no changes to an *Agent* or a client application.

1190 5 MTConnect Fundamentals

1191 The MTConnect Standard defines the functionality of an *Agent*. In an MTConnect instal-
 1192 lation, pieces of equipment publish information to an *Agent*. Client software applications
 1193 request information from the *Agent* using a communications protocol. Based on the spe-
 1194 cific information that the client software application has requested from the *Agent*, the
 1195 *Agent* forms a *Response Document* based upon one of the *semantic data models* defined
 1196 in the MTConnect Standard and then transmits that document to the client software appli-
 1197 cation.

1198 *Figure 2* illustrates the architecture of a typical MTConnect installation.

Figure 2: MTConnect Architecture Model

1199 Note: In each implementation of a communication system based on the MTConnect
 1200 Standard, there **MUST** be a schema defined that encodes the rules and termi-
 1201 nology defined for each of the *semantic data models*. These schemas **MAY** be
 1202 used by client software applications to validate the content and structure of the
 1203 *Response Documents* published by an *Agent*.

1204 5.1 Agent

1205 An *Agent* is the centerpiece of an MTConnect implementation. It provides two primary
 1206 functions:

- 1207 • Organizes and manages individual pieces of information published by one or more
 1208 pieces of equipment.

1209 • Publishes that information in the form of a *Response Document* to client software
1210 applications.

1211 The MTConnect Standard addresses the behavior of an *Agent* and the structure and mean-
1212 ing of the data published by an *Agent*. It is the responsibility of the implementer of an
1213 *Agent* to determine the means by which the behavior is achieved for a specific *Agent*.

1214 An *Agent* is software that may be installed as part of a piece of equipment or it may be
1215 installed separately. When installed separately, an *Agent* may receive information from
1216 one or more pieces of equipment.

1217 Some pieces of equipment may be able to communicate directly to an *Agent*. Other pieces
1218 of equipment may require an *Adapter* to transform the information provided by the equip-
1219 ment into a form that can be sent to an *Agent*. In either case, the method of transmitting
1220 information from the piece of equipment to an *Agent* is implementation dependent and is
1221 not addressed as part of the MTConnect Standard.

1222 One function of an *Agent* is to store information that it receives from a piece of equipment
1223 in an organized manner. A second function of an *Agent* is to receive *Requests* for informa-
1224 tion from one or many client software applications and then respond to those *Requests* by
1225 publishing a *Response Document* that contains the requested information.

1226 There are three types of information stored by an *Agent* that **MAY** be published in a *Re-*
1227 *sponse Document*. These are:

1228 • *Equipment Metadata* defines the *Structural Elements* that represent the physical and
1229 logical parts and sub-parts of each piece of equipment that can publish data to the
1230 *Agent*, the relationships between those parts and sub-parts, and the *Data Entities*
1231 associated with each of those *Structural Elements*. This *Equipment Metadata* is
1232 provided in an *MTConnectDevices Response Document*. See *MTConnect Standard:*
1233 *Part 2.0 - Devices Information Model* for more information on *Equipment Metadata*.

1234 • *Streaming Data* provides the values published by pieces of equipment for the *Data*
1235 *Entities* defined by the *Equipment Metadata*. *Streaming Data* is provided in an *MT-*
1236 *ConnectStreams Response Document*. See *MTConnect Standard: Part 2.0 - Devices*
1237 *Information Model* for more information on *Streaming Data*.

1238 • *MTConnect Assets* represent information used in a manufacturing operation that is
1239 commonly shared amongst multiple pieces of equipment and/or software applica-
1240 tions. *MTConnect Assets* are provided in an *MTConnectAssets Response Document*.
1241 See *MTConnect Standard: Part 4.0 - Assets Information Model* for more informa-
1242 tion on *MTConnect Assets*.

1243 The exchange between an *Agent* and a client software application is a *Request* and *Re-*
1244 *sponse* information exchange mechanism. See *Section 5.4 - Request/Response Information*
1245 *Exchange* for details on this *Request/Response* information exchange mechanism.

1246 **5.1.1 Instance of an Agent**

1247 As described above, an *Agent* collects and organizes values published by pieces of equip-
1248 ment. As with any piece of software, an *Agent* may be periodically restarted. When an
1249 *Agent* restarts, it **MUST** indicate to client software applications whether the information
1250 available in the *buffer* represents a completely new set of data or if the *buffer* includes data
1251 that had been collected prior to the restart of the *Agent*.

1252 Any time an *Agent* is restarted and begins to collect a completely new set of *Streaming*
1253 *Data*, that set of data is referred to as an *instance* of the *Agent*. The *Agent* **MUST** maintain
1254 a piece of information called `instanceId` that represents the specific *instance* of the
1255 *Agent*.

1256 `instanceId` is represented by a 64-bit integer. The `instanceId` **MAY** be imple-
1257 mented using any mechanism that will guarantee that the value for `instanceId` will be
1258 unique each time the *Agent* begins collecting a new set of data.

1259 When an *Agent* is restarted and it provides a method to recover all, or some portion, of
1260 the data that was stored in the *buffer* before it stopped operating, the *Agent* **MUST** use the
1261 same `instanceId` that was defined prior to the restart.

1262 **5.1.2 Storage of Equipment Metadata for a Piece of Equipment**

1263 An *Agent* **MUST** be capable of publishing *Equipment Metadata* for each piece of equip-
1264 ment that publishes information through the *Agent*. *Equipment Metadata* is typically a
1265 static file defining the *Structural Elements* associated with each piece of equipment re-
1266 porting information through the *Agent* and the *Data Entities* that can be associated with
1267 each of these *Structural Elements*. See details on *Structural Elements* and *Data Entities* in
1268 *MTConnect Standard: Part 2.0 - Devices Information Model*.

1269 The MTConnect Standard does not define the mechanism to be used by an *Agent* to ac-
1270 quire, maintain, or store the *Equipment Metadata*. This mechanism **MUST** be defined as
1271 part of the implementation of a specific *Agent*.

1272 5.1.3 Storage of Streaming Data

1273 *Streaming Data* that is published from a piece(s) of equipment to an *Agent* is stored by the
 1274 *Agent* based upon the sequence upon which each piece of data is received. As described
 1275 below, the order in which data is stored by the *Agent* is one of the factors that determines
 1276 the data that may be included in a specific *MTConnectStreams Response Document*.

1277 5.1.3.1 Management of Streaming Data Storage

1278 An *Agent* stores a fixed amount of data. The amount of data stored by an *Agent* is depen-
 1279 dent upon the implementation of a specific *Agent*. The examples below demonstrate how
 1280 discrete pieces of data received from pieces of equipment are stored.

1281 The method for storing *Streaming Data* in an *Agent* can be thought of as a tube that can
 1282 hold a finite set of balls. Each ball represents the occurrence of a *Data Entity* published
 1283 by a piece of equipment. This data is pushed in one end of the tube until there is no more
 1284 room for additional balls. At that point, any new data inserted will push the oldest data out
 1285 the back of the tube. The data in the tube will continue to shift in this manner as new data
 1286 is received.

1287 This tube is referred to as a *buffer* in an *Agent*.

Figure 3: Data Storage in Buffer

1288 In *Figure 4*, the maximum number of *Data Entities* that can be stored in the *buffer* of
 1289 the *Agent* is 8. The maximum number of *Data Entities* that can be stored in the *buffer* is
 1290 represented by a value called `bufferSize`. This example illustrates that when the *buffer*
 1291 fills up, the oldest piece of data falls out the other end.

Figure 4: First In First Out Buffer Management

1292 This process constrains the memory storage requirements for an *Agent* to a fixed maximum
1293 size since the MTConnect Standard only requires an *Agent* to store a finite number of
1294 pieces of data.

1295 As an implementation guideline, the *buffer* **SHOULD** be sized large enough to provide
1296 storage for a reasonable amount of information received from all pieces of equipment
1297 that are publishing information to that *Agent*. The implementer should also consider the
1298 impact of a temporary loss of communications between a client software application and
1299 an *Agent* when determining the size for the *buffer*. A larger *buffer* will allow a client
1300 software application more time to reconnect to an *Agent* without losing data.

1301 **5.1.3.2 Sequence Numbers**

1302 In an *Agent*, each occurrence of a *Data Entity* in the *buffer* will be assigned a monotonically
1303 increasing *sequence number* as it is inserted into the *buffer*. The *sequence number*
1304 is a 64-bit integer and the values assigned as *sequence numbers* will never wrap around or
1305 be exhausted; at least within the next 100,000 years based on the size of a 64-bit number.

1306 *sequence number* is the primary key identifier used to manage and locate a specific piece
1307 of data in an *Agent*. The *sequence number* associated with each *Data Entity* reported by
1308 an *Agent* is identified with an attribute called `sequence`.

1309 The *sequence number* for each piece of data **MUST** be unique for an instance of an *Agent*
1310 (see *Section 5.1.1 - Instance of an Agent* for information on *instances* of an *Agent*). If data
1311 is received from more than one piece of equipment, the *sequence numbers* are based on
1312 the order in which the data is received regardless of which piece of equipment produced
1313 that data. The *sequence number* **MUST** be a monotonically increasing number that spans
1314 all pieces of equipment publishing data to an *Agent*. This allows for multiple pieces of
1315 equipment to publish data through a single *Agent* with no *sequence number* collisions and
1316 unnecessary protocol complexity.

1317 The *sequence number* **MUST** be reset to one (1) each time an *Agent* is restarted and begins
1318 to collect a fresh set of data; i.e., each time `instanceId` is changed.

1319 *Figure 5* demonstrates the relationship between `instanceId` and `sequence` when an
1320 *Agent* stops and restarts and begins collecting a new set of data. In this case, the `in-`
1321 `stanceId` is changed to a new value and value for `sequence` resets to one (1):

instanceId	sequence
234556	234
	235
	236
	237
	238

Agent Stops and Restarts

234557	1
	2
	3
	4
	5

Figure 5: instanceId and sequence

1322 *Figure 6* also shows two additional pieces of information defined for an *Agent*:

- 1323 • `firstSequence` – the oldest piece of data contained in the *buffer*; i.e., the next
- 1324 piece of data to be moved out of the *buffer*
- 1325 • `lastSequence` – the newest data added to the *buffer*

1326 `firstSequence` and `lastSequence` provide guidance to a software application iden-
 1327 tifying the range of data available that may be requested from an *Agent*.

Figure 6: Identifying the range of data with `firstSequence` and `lastSequence`

1328 When a client software application requests data from an *Agent*, it can specify both the
 1329 *sequence number* of the first piece of data (`from`) that **MUST** be included in the *Response*

1330 *Document* and the total number (*count*) of pieces of data that **SHOULD** be included in
 1331 that document.

1332 In *Figure 7*, the request specifies that the data to be returned starts at *sequence number 15*
 1333 (*from*) and includes a total of three items (*count*).

Figure 7: Identifying the range of data with *from* and *count*

1334 Once a *Response* to a *Request* has been completed, the value of *nextSequence* will be
 1335 established. *nextSequence* is the *sequence number* of the next piece of data available
 1336 in the *buffer*. In the example in *Figure 7*, the next *sequence number* (*nextSequence*)
 1337 will be 18.

1338 As shown in *Figure 8*, the combination of *from* and *count* defined by the *Request*
 1339 indicates a *sequence number* for data that is beyond that which is currently in the *buffer*.
 1340 In this case, *nextSequence* is set to a value of *lastSequence* + 1.

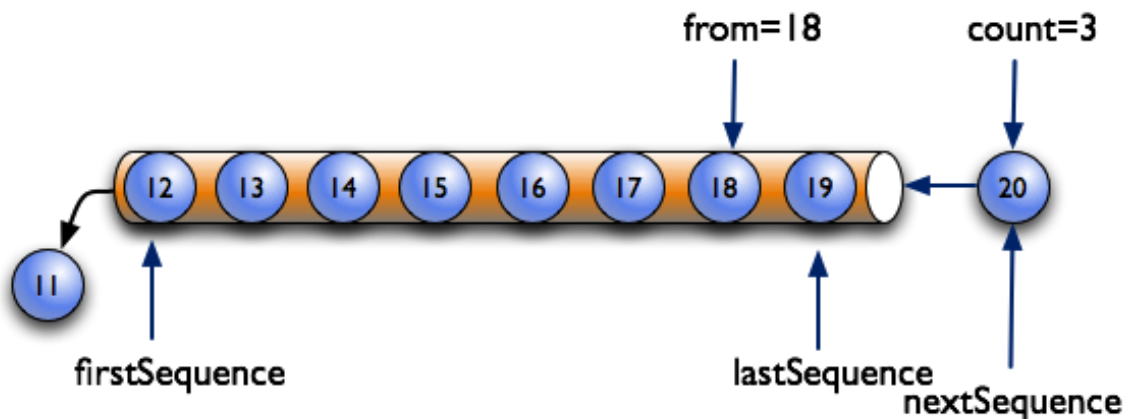

Figure 8: Identifying the range of data with nextSequence and lastSequence

1341 5.1.3.3 Buffer Data Structure

1342 The information in the *buffer* of an *Agent* can be thought of as a four-column table of data.
 1343 Each column in the table represents:

- 1344 • The first column is the *sequence number* associated with each *Data Entity* - se-
 1345 quence.
- 1346 • The second column is the time that the data was published by a piece of equip-
 1347 ment. This time is defined as the `timestamp` associated with that *Data Entity*. See
 1348 *Section 5.1.3.4 - Time Stamp* for details on `timestamp`.
- 1349 • The third column, `dataItemId`, refers to the identity of *Data Entities* as they will
 1350 appear in the *MTCConnectStreams Response Document*. See *Section 5 of MTCConnect*
 1351 *Standard: Part 3.0 - Streams Information Model* for details on `dataItemId` for
 1352 a *Data Entity* and how that identify relates to the `id` attribute of the corresponding
 1353 *Data Entity* in the *Devices Information Model*.
- 1354 • The fourth column is the value associated with each *Data Entity*.

1355 *Figure 9* is an example demonstrating the concept of how data may be stored in an *Agent*:

AGENT			
Seq	Time	dataItemId	Value
101	2016-12-13T09:44:00.2221	AVAIL-28277	UNAVAILABLE
102	2016-12-13T09:54:00.3839	AVAIL-28277	AVAILABLE
103	2016-12-13T10:00:00.0594	POS-Y-28277	25.348
104	2016-12-13T10:00:00.0594	POS-Z-28277	13.23

Figure 9: Data Storage Concept

1356 The storage mechanism for the data, the internal representation of the data, and the imple-
 1357 mentation of the *Agent* itself is not part of the MTConnect Standard. The implementer can
 1358 choose both the amount of data to be stored in the *Agent* and the mechanism for how the
 1359 data is stored. The only requirement is that an *Agent* publish the *Response Documents* in
 1360 the required format.

1361 5.1.3.4 Time Stamp

1362 Each piece of equipment that publishes information to an *Agent* **SHOULD** provide a time
 1363 stamp indicating when each piece of information was measured or determined. If no time
 1364 stamp is provided, the *Agent* **MUST** provide a time stamp for the information based upon
 1365 when that information was received at the *Agent*.

1366 The `timestamp` associated with each piece of information is reported by an *Agent* as
 1367 `timestamp`. `timestamp` **MUST** be reported in UTC (Coordinated Universal Time)
 1368 format; e.g., "2010-04-01T21:22:43Z".

1369 Note: Z refers to UTC/GMT time, not local time.

1370 Client software applications should use the value of `timestamp` reported for each piece
 1371 of information as the means for ordering when pieces of information were generated as
 1372 opposed to using `sequence` for this purpose.

1373 Note: It is assumed that `timestamp` provides the best available estimate of the time
1374 that the value(s) for the published information was measured or determined.

1375 If two pieces of information are measured or determined at the exact same time, they
1376 **MUST** be reported with the same value for `timestamp`. Likewise, all information that
1377 is recorded in the *buffer* with the same value for `timestamp` should be interpreted as
1378 having been recorded at the same point in time; even if that data was published by more
1379 than one piece of equipment.

1380 **5.1.3.5 Recording Occurrences of Streaming Data**

1381 An *Agent* **MUST** record data in the *buffer* each time the value for that specific piece of data
1382 changes. If a piece of equipment publishes multiple occurrences of a piece of data with
1383 the same value, the *Agent* **MUST NOT** record multiple occurrence for that *Data Entity*.

1384 Note: There is one exception to this rule. Some *Data Entities* may be defined with a
1385 `representation` attribute value of `DISCRETE` (**DEPRECATED** in *Ver-*
1386 *sion 1.5*) (See *Section 7.2.2.12 of MTConnect Standard: Part 2.0 - Devices*
1387 *Information Model* for details on `representation`.) In this case, each oc-
1388 currence of the data represents a new and unique piece of information. The
1389 *Agent* **MUST** then record each occurrence of the *Data Entity* that is published
1390 by a piece of equipment.

1391 The value for each piece of information reported by an *Agent* must be considered by a
1392 client software application to be valid until such a time that another occurrence of that
1393 piece of information is published by the *Agent*.

1394 **5.1.3.6 Maintaining Last Value for Data Entities**

1395 An *Agent* **MUST** retain a copy of the last available value associated with each *Data Entity*
1396 known to the *Agent*; even if an occurrence of that *Data Entity* is no longer in the *buffer*.
1397 This function allows an *Agent* to provide a software application a view of the last known
1398 value for each *Data Entity* associated with a piece of equipment.

1399 The *Agent* **MUST** also retain a copy of the last value associated with each *Data Entity* that
1400 has flowed out of the *buffer*. This function allows an *Agent* to provide a software applica-
1401 tion a view of the last known value for each *Data Entity* associated with a *Current Request*
1402 with an `at` parameter in the `query` portion of its *HTTP Request Line* (See *Section 8.3.2 -*
1403 *Current Request Implemented Using HTTP* for details on *Current Request*).

1404 **5.1.3.7 Unavailability of Data**

1405 An *Agent* **MUST** maintain a list of *Data Entities* that **MAY** be published by each piece of
 1406 equipment providing information to the *Agent*. This list of *Data Entities* is derived from
 1407 the *Equipment Metadata* stored in the *Agent* for each piece of equipment.

1408 Each time an *Agent* is restarted, the *Agent* **MUST** place an occurrence of every *Data*
 1409 *Entity* in the *buffer*. The value reported for each of these *Data Entities* **MUST** be set to
 1410 UNAVAILABLE and the `timestamp` for each **MUST** be set to the time that the last piece
 1411 of data was collected by the *Agent* prior to the restart.

1412 If at any time an *Agent* loses communications with a piece of equipment, or the *Agent* is
 1413 unable to determine a valid value for all, or any portion, of the *Data Entities* published by
 1414 a piece of equipment, the *Agent* **MUST** place an occurrence of each of these *Data Entities*
 1415 in the *buffer* with its value set to UNAVAILABLE. This signifies that the value is currently
 1416 indeterminate and no assumptions of a valid value for the data is possible.

1417 Since an *Agent* may receive information from multiple pieces of equipment, it **MUST**
 1418 consider the validity of the data from each of these pieces of equipment independently.

1419 There is one exception to the rules above. Any *Data Entity* that is constrained to a constant
 1420 data value **MUST** be reported with the constant value and the *Agent* **MUST NOT** set the
 1421 value of that *Data Entity* to UNAVAILABLE.

1422 Note: The schema for the *Devices Information Model* (defined in *MTCConnect Stan-*
 1423 *dard: Part 2.0 - Devices Information Model*) defines how the value reported for
 1424 an individual piece of data may be constrained to one or more specific values.

1425 **5.1.3.8 Persistence and Recovery**

1426 The implementer of an *Agent* must decide on a strategy regarding the storage of *Streaming*
 1427 *Data* in the *buffer* of the *Agent*.

1428 In the simplest form, an *Agent* can hold the *buffer* information in volatile memory where
 1429 no data is persisted when the *Agent* is stopped. In this case, the *Agent* **MUST** update the
 1430 value for `instanceId` when the *Agent* restarts to indicate that the *Agent* has begun to
 1431 collect a new set of data.

1432 If the implementation of an *Agent* provides a method of persisting and restoring all or
 1433 a portion of the information in the *buffer* of the *Agent* (*sequence numbers, time stamps,*
 1434 *identify, and values*), the *Agent* **MUST NOT** change the value of the `instanceId` when
 1435 the *Agent* restarts. This will indicate to a client software application that it does not need to
 1436 reset the value for `nextSequence` when it requests the next set of data from the *Agent*.

1437 When an implementer chooses to provide a method to persist the information in an *Agent*,
1438 they may choose to store as much data as is practical in a recoverable storage system. Such
1439 a method may also include the ability to store historical information that has previously
1440 been pushed out of the *buffer*.

1441 **5.1.3.9 Heartbeat**

1442 An *Agent* **MUST** provide a function that indicates to a client application that the HTTP
1443 connection is still viable during times when there is no new data available to report in a
1444 *Response Document*. This function is defined as *heartbeat*.

1445 *heartbeat* represents the amount of time after a *Response Document* has been published
1446 until a new *Response Document* **MUST** be published, even when no new data is available.

1447 See *Section 8.3.3.2 - Query Portion of the HTTP Request Line for a Sample Request* for
1448 more details on configuring the *heartbeat* function.

1449 **5.1.3.10 Data Sets**

1450 See *MTConnect Standard: Part 3.0 - Streams Information Model Section Part 3: DataItem*
1451 *with representation of DATA_SET* for management of *Data Sets*.

1452 **5.1.4 Storage of Documents for MTConnect Assets**

1453 An *Agent* also stores information associated with *MTConnect Assets*.

1454 When a piece of equipment publishes a document that represents information associated
1455 with an *MTConnect Asset*, an *Agent* stores that document in a *buffer*. This *buffer* is called
1456 the *assets buffer*. The document is called an *Asset Document*.

1457 The *assets buffer* **MUST** be a separate *buffer* from the one where the *Streaming Data* is
1458 stored.

1459 The *Asset Document* that is published by the piece of equipment **MUST** be organized
1460 based upon one of the applicable *Asset Information Models* defined in one of the *Parts 4.x*
1461 of the MTConnect Standard.

1462 An *Agent* will only retain a limited number of *Asset Documents* in the *assets buffer*. The
1463 *assets buffer* functions similar to the *buffer* for *Streaming Data*; i.e., when the *assets buffer*
1464 is full, the oldest *Asset Document* is pushed from the *buffer*.

1465 *Figure 10* demonstrates the oldest *Asset Document* being pushed from the *assets buffer*
 1466 when a new *Asset Document* is added and the *assets buffer* is full:

Figure 10: First In First Out Asset Buffer Management

1467 Within an *Agent*, the management of *Asset Documents* behave like a key/value storage in a
 1468 database. In the case of *MTCConnect Assets*, the key is an identifier for an *Asset* (see details
 1469 on `assetId` in *MTCConnect Standard: Part 4.0 - Assets Information Model*) and the value
 1470 is the *Asset Document* that was published by the piece of equipment.

1471 *Figure 11* demonstrates the relationship between the key (`assetId`) and the stored *Asset*
 1472 *Documents*:

Figure 11: Relationship between `assetId` and stored *Asset documents*

1473 Note: The key (`assetId`) is independent of the order of the *Asset Documents* stored
1474 in the *assets buffer*.

1475 When an *Agent* receives a new *Asset Document* representing an *MTCConnect Asset*, it must
1476 determine whether this document represents an *MTCConnect Asset* that is not currently
1477 represented in the *assets buffer* or if the document represents new information for an *MT-*
1478 *Connect Asset* that is already represented in the *assets buffer*. When a new *Asset Document*
1479 is received, one of the following **MUST** occur:

1480 • If the *Asset Document* represents an *MTCConnect Asset* that is not currently repre-
1481 sented in the *assets buffer*, the *Agent* **MUST** add the new document to the front
1482 of the *assets buffer*. If the *assets buffer* is full, the oldest *Asset Document* will be
1483 removed from the *assets buffer*.

1484 • If the *Asset Document* represents an *MTCConnect Asset* that is already represented in
1485 the *assets buffer*, the *Agent* **MUST** remove the existing *Asset Document* representing
1486 that *MTCConnect Asset* from the *assets buffer* and add the new *Asset Document* to the
1487 front of the *assets buffer*.

1488 The *MTCConnect Standard* does not specify the maximum number of *Asset Documents*
1489 that may be stored in the *assets buffer*; that limit is determined by the implementation
1490 of a specific *Agent*. The number of *Asset Documents* that may be stored in an *Agent* is
1491 defined by the value for `assetBufferSize` (See *Section 6.5 - Document Header* for
1492 more information on `assetBufferSize`). A value of 4,294,967,296 or 2^{32} can be
1493 provided for `assetBufferSize` to indicate unlimited storage.

1494 There is no requirement for an *Agent* to provide persistence for the *Asset Documents* stored
1495 in the *assets buffer*. If an *Agent* should fail, all *Asset Documents* stored in the *assets buffer*
1496 **MAY** be lost. It is the responsibility of the implementer to determine if *Asset Documents*
1497 stored in an *Agent* may be restored or if those *Asset Documents* are retained by some other
1498 software application.

1499 Additional details on how an *Agent* organizes and manages information associated with
1500 *MTCConnect Assets* are provided in *MTCConnect Standard: Part 4.0 - Assets Information*
1501 *Model*.

1502 5.2 Response Documents

1503 *Response Documents* are electronic documents generated and published by an *Agent* in
1504 response to a *Request* for data.

1505 The *Response Documents* defined in the MTConnect Standard are:

- 1506 • *MTConnectDevices Response Document*: An electronic document that contains the
1507 information published by an *Agent* describing the data that can be published by one
1508 or more piece(s) of equipment. The structure of the *MTConnectDevices Response*
1509 *Document* document is based upon the requirements defined by the *Devices Infor-*
1510 *mation Model*. See *MTConnect Standard: Part 2.0 - Devices Information Model* for
1511 details on this information model.
- 1512 • *MTConnectStreams Response Document*: An electronic document that contains the
1513 information published by an *Agent* that contains the data that is published by one
1514 or more piece(s) of equipment. The structure of the *MTConnectStreams Response*
1515 *Document* document is based upon the requirements defined by the *Streams Infor-*
1516 *mation Model*. See *MTConnect Standard: Part 3.0 - Streams Information Model* for
1517 details on this information model.
- 1518 • *MTConnectAssets Response Document*: An electronic document that contains the
1519 information published by an *Agent* that **MAY** include one or more *Asset Documents*.
1520 The structure of the *MTConnectAssets Response Document* document is based upon
1521 the requirements defined by the *Asset Information Models*. See *MTConnect Stan-*
1522 *dard: Part 4.0 - Assets Information Model* for details on this information model.
- 1523 • *MTConnectErrors Response Document*: An electronic document that contains the
1524 information provided by an *Agent* when an error has occurred when trying to re-
1525 spond to a *Request* for data. The structure of the *MTConnectErrors Response Doc-*
1526 *ument* is based upon the requirements defined by the *Error Information Model*. See
1527 *Section 9 - Error Information Model* of this document for details on this information
1528 model.

1529 *Response Documents* may be represented by any document format supported by an *Agent*.
1530 No matter what document format is used to structure these documents, the requirements
1531 for representing the data and other information contained in those documents **MUST** ad-
1532 here to the requirements defined in the *Information Models* associated with each document.

1533 5.2.1 XML Documents

1534 XML is currently the only document format supported by the MTConnect Standard for
1535 encoding *Response Documents*. Other document formats may be supported in the future.

1536 Since XML is the document format supported by the MTConnect Standard for encoding
1537 documents, all examples demonstrating the structure of the *Response Documents* provided

1538 throughout the MTConnect Standard are based on XML. These documents will be referred
1539 to as *MTConnect XML Documents* or *XML Documents*.

1540 *Section 6 - XML Representation of Response Documents* defines how each document is
1541 structured as an *XML Document*.

1542 5.3 Semantic Data Models

1543 A *semantic data model* is a software engineering method for representing data where the
1544 context and the meaning of the data is constrained and fully defined.

1545 Each of the *semantic data models* defined by the MTConnect Standard include:

- 1546 • The types of information that may be published by a piece of equipment,
- 1547 • The meaning of that information and units of measure, if applicable,
- 1548 • Structural information that defines how different pieces of information relate to each
1549 other, and
- 1550 • Structural information that defines how the information relates to where the infor-
1551 mation was measured or generated by the piece of equipment.

1552 As described previously, the content of the *Response Documents* provided by an *Agent* are
1553 each defined by a specific *semantic data model*. The details for the *semantic data model*
1554 used to define each of the *Response Documents* are detail as follows:

- 1555 • *MTConnectDevices Response Document: MTConnect Standard: Part 2.0 - Devices*
1556 *Information Model*.
- 1557 • *MTConnectStreams Response Document: MTConnect Standard: Part 3.0 - Streams*
1558 *Information Model*.
- 1559 • *MTConnectAssets Response Document: MTConnect Standard: Part 4.0 - Assets*
1560 *Information Model* and its sub-Parts.
- 1561 • *MTConnectErrors Response Document: MTConnect Standard Part 1.0 - Overview*
1562 *and Fundamentals, Section 9 - Error Information Model*.

1563 Without semantics, a single piece of data does not convey any relevant meaning to a person
1564 or a client software application. However, when that piece of data is paired with some

1565 semantic context, the data inherits significantly more meaning. The data can then be more
1566 completely interpreted by a client software application without human intervention.

1567 The MTConnect *semantic data models* allows the information published by a piece of
1568 equipment to be transmitted to client software application with a full definition of the
1569 meaning of that information and in full context defining how that information relates to
1570 the piece of equipment that measured or generated the information.

1571 5.4 Request/Response Information Exchange

1572 The transfer of information between an *Agent* and a client software application is based
1573 on a *Request/Response* information exchange approach. A client software application
1574 requests specific information from an *Agent*. An *Agent* responds to the *Request* by pub-
1575 lishing a *Response Document*.

1576 In normal operation, there are four types of *MTConnect Requests* that can be issued by
1577 a client software application that will result in different *Responses* by an *Agent*. These
1578 *Requests* are:

- 1579 • *Probe Request*– A client software application requests the *Equipment Metadata* for
1580 each piece of equipment that **MAY** publish information through an *Agent*. The *Agent*
1581 publishes a *MTConnectDevices Response Document* that contains the requested in-
1582 formation. A *Probe Request* is represented by the term `probe` in a *Request* from a
1583 client software application.
- 1584 • *Current Request* – A client software application requests the current value for each
1585 of the data types that have been published from a piece(s) of equipment to an *Agent*.
1586 The *Agent* publishes a *MTConnectStreams Response Document* that contains the
1587 requested information. A *Current Request* is represented by the term `current` in
1588 a *Request* from a client software application.
- 1589 • *Sample Request* – A client software application requests a series of data values from
1590 the *buffer* in an *Agent* by specifying a range of *sequence numbers* representing that
1591 data. The *Agent* publishes a *MTConnectStreams Response Document* that contains
1592 the requested information. A *Sample Request* is represented by the term `sample` in
1593 a *Request* from a client software application.
- 1594 • *Asset Request* – A client software application requests information related to *MT-*
1595 *Connect Assets* that has been published to an *Agent*. The *Agent* publishes an *MT-*
1596 *ConnectAssets Response Document* that contains the requested information. An *As-*
1597 *set Request* is represented by the term `asset` in a *Request* from a client software
1598 application.

1599 Note: If an *Agent* is unable to respond to the request for information or the re-
1600 quest includes invalid information, the *Agent* will publish an *MTCConnectErrors*
1601 *Response Document*. See *Section 9 - Error Information Model* for information
1602 regarding *Error Information Model*

1603 The specific format for the *Request* for information from an *Agent* will depend on the
1604 *Protocol* implemented as part of the *Request/Response* information exchange mechanism
1605 deployed in a specific implementation. See *Section 7 - Protocol and Messaging, Protocol*
1606 for details on implementing the *Request/Response* information exchange.

1607 Also, the specific format for the *Response Documents* may also be implementation de-
1608 pendent. See *Section 6 - XML Representation of Response Documents* for details on the
1609 format for the *Response Documents* encoded with XML.

1610 **5.5 Accessing Information from an Agent**

1611 Each of the *Requests* defined for the *Request/Response* information exchange requires
1612 an *Agent* to respond with a specific view of the information stored by the *Agent*. The
1613 following describes the relationships between the information stored by an *Agent* and the
1614 contents of the *Response Documents*.

1615 **5.5.1 Accessing Equipment Metadata from an Agent**

1616 The *Equipment Metadata* associated with each piece of equipment that publishes infor-
1617 mation to an *Agent* is typically static information that is maintained by the *Agent*. The
1618 MTCConnect Standard does not define how the *Agent* captures or maintains that informa-
1619 tion. The only requirement that the MTCConnect Standard places on an *Agent* regarding this
1620 *Equipment Metadata* is that the *Agent* properly store this information and then configure
1621 and publish a *MTCConnectDevices Response Document* in response to a *Probe Request*.

1622 All issues associated with the capture and maintenance of the *Equipment Metadata* is the
1623 responsibility of the implementer of a specific *Agent*.

1624 **5.5.2 Accessing Streaming Data from the Buffer of an Agent**

1625 There are two *Requests* defined for the *Request/Response* information exchange that re-
1626 quire an *Agent* to provide different views of the information stored in the *buffer* of the
1627 *Agent*. These *Requests* are *current* and *sample*.

1628 The example in *Figure 12* demonstrates how an *Agent* interprets the information stored
 1629 in the *buffer* to provide the content that is published in different versions of the *MTConnectStreams Response Document* based on the specific *Request* that is issued by a client
 1630 software application.
 1631

1632 In this example, an *Agent* with a *buffer* that can hold up to eight (8) *Data Entities*; i.e., the
 1633 value for `bufferSize` is 8. This *Agent* is collecting information for two pieces of data
 1634 – `Pos` representing a position and `Line` representing a line of logic or commands in a
 1635 control program.

1636 In this *buffer*, the value for `firstSequence` is 12 and the value for `lastSequence`
 1637 is 19. There are five (5) different values for `Pos` and three (3) different values for `Line`.

Figure 12: Example Buffer

1638 If an *Agent* receives a *Sample Request* from a client software application, the *Agent* **MUST**
 1639 publish an *MTConnectStreams Response Document* that contains a range of data values.
 1640 The range of values are defined by the `from` and `count` parameters that must be included
 1641 as part of the *Sample Request*. If the value of `from` is 14 and the value of `count` is 5,
 1642 the *Agent* **MUST** publish an *MTConnectStreams Response Document* that includes five
 1643 (5) pieces of data represented by *sequence numbers* 14, 15, 16, 17, and 18 – three (3)
 1644 occurrences of `Line` and two (2) occurrences of `Pos`. In this case, `nextSequence` will
 1645 also be returned with a value of 19.

1646 Likewise, if the same *Agent* receives a *Current Request* from a client software application,
 1647 the *Agent* **MUST** publish an *MTConnectStreams Response Document* that contains the
 1648 most current information available for each of the types of data that is being published to
 1649 the *Agent*. In this case, the specific data that **MUST** be represented in the *MTConnect-*
 1650 *Streams Response Document* is `Pos` with a value of 22 and a *sequence number* of 19 and
 1651 `Line` with a value of 227 and a *sequence number* of 18.

1652 There is also a derivation of the *Current Request* that will cause an *Agent* to publish an
1653 *MTConnectStreams Response Document* that contains a set of data relative to a specific
1654 sequence number. The *Current Request* **MAY** include an additional parameter called *at*.
1655 When the *at* parameter, along with an *instanceId*, is included as part of a *Current Re-*
1656 *quest*, an *Agent* **MUST** publish an *MTConnectStreams Response Document* that contains
1657 the most current information available for each of the types of *Data Entities* that are being
1658 published to the *Agent* that occur immediately at or before the *sequence number* specified
1659 with the *at* parameter.

1660 For example, if the *Request* is *current?at=15*, an *Agent* **MUST** publish a *MTCon-*
1661 *nectStreams Response Document* that contains the most current information available for
1662 each of the *Data Entities* that are stored in the *buffer* of the *Agent* with a *sequence number*
1663 of 15 or lower. In this case, the specific data that **MUST** be represented in the *MTCon-*
1664 *nectStreams Response Document* is *Pos* with a value of 10 and a *sequence number* of 13
1665 and *Line* with a value of 220 and a *sequence number* of 15.

1666 If a *current Request* is received for a *sequence number* of 11 or lower, an *Agent* **MUST**
1667 return an *OUT_OF_RANGE MTConnectErrors Response Document*. The same *HTTP Er-*
1668 *ror Message* **MUST** be given if a *sequence number* is requested that is greater than the
1669 end of the *buffer*. See *Section 9 - Error Information Model* for more information on *MT-*
1670 *ConnectErrors Response Document*.

1671 5.5.3 Accessing MTConnect Assets Information from an Agent

1672 When an *Agent* receives an *Asset Request*, the *Agent* **MUST** publish an *MTConnectAs-*
1673 *sets* document that contains information regarding the *Asset Documents* that are stored
1674 in the *Agent*.

1675 See *MTConnect Standard: Part 4.0 - Assets Information Model* for details on *MTConnect*
1676 *Assets*, *Asset Requests*, and the *MTConnectAssets Response Document*.

1677 6 XML Representation of Response Documents

1678 As defined in *Section 5.2.1 - XML Documents*, XML is currently the only language sup-
1679 ported by the MTConnect Standard for encoding *Response Documents*.

1680 *Response Documents* must be valid and conform to the *schema* defined in the *semantic*
1681 *data model* defined for that document. The *schema* for each *Response Document* **MUST**
1682 be updated to correlate to a specific version of the MTConnect Standard. Versions, within
1683 a *major* version, of the MTConnect Standard will be defined in such a way to best maintain
1684 backwards compatibility of the *semantic data models* through all *minor* revisions of the
1685 Standard. However, new *minor* versions may introduce extensions or enhancements to
1686 existing *semantic data models*.

1687 To be valid, a *Response Document* must be well-formed; meaning that, amongst other
1688 things, each element has the required XML *start-tag* and *end-tag* and that the document
1689 does not contain any illegal characters. The validation of the document may also include
1690 a determination that required elements and attributes are present, they only occur in the
1691 appropriate location in the document, and they appear only the correct number of times.
1692 If the document is not well-formed, it may be rejected by a client software application.
1693 The *semantic data model* defined for each *Response Document* also specifies the elements
1694 and *Child Elements* that may appear in a document. XML elements may contain *Child*
1695 *Elements*, CDATA, or both. The *semantic data model* also defines the number of times
1696 each element and *Child Element* may appear in the document.

1697 Each *Response Document* encoded using XML consists of the following primary sections:

- 1698 ● XML Declaration
- 1699 ● Root Element
- 1700 ● Schema and Namespace Declaration
- 1701 ● Document Header
- 1702 ● Document Body

1703 The following will provide details defining how each of the *Response Documents* are en-
1704 coded using XML.

1705 Note: See *Section 3 - Terminology and Conventions* for the definition of XML related
1706 terms used in the MTConnect Standard.

1707 6.1 Fundamentals of Using XML to Encode Response Documents

1708 The MTConnect Standard follows industry conventions for formatting the elements and
1709 attributes included in an XML document. The general guidelines are as follows:

1710 • All element names **MUST** be specified in Pascal case (first letter of each word is
1711 capitalized). For example: <PowerSupply/>.

1712 • The name for an attribute **MUST** be Camel case; similar to Pascal case, but the first
1713 letter will be lower case. For example: <MyElement nativeName="bob"/>
1714 where MyElement is the *Element Name* and nativeName is an attribute.

1715 • All CDATA values that are defined with a limited or controlled vocabulary **MUST**
1716 be in upper case with an _ (underscore) separating words. For example: ON, OFF,
1717 ACTUAL, and COUNTER_CLOCKWISE.

1718 • The values provided for a date and/or a time **MUST** follow the W3C ISO 8601
1719 format with an arbitrary number of decimals representing fractions of a second.
1720 Refer to the following specification for details on the format for dates and times:
1721 <http://www.w3.org/TR/NOTE-datetime>.

1722 The format for the value describing a date and a time will be
1723 YYYY-MM-DDThh:mm:ss.ffff. An example would be: 2017-01-13T13:01.213415Z.

1724 Note: Z refers to UTC/GMT time, not local time.

1725 The accuracy and number of decimals representing fractions of a second for a `time-`
1726 `stamp` **MUST** be determined by the capabilities of the piece of equipment publishing
1727 information to an *Agent*. All time values **MUST** be provided in UTC (GMT).

1728 • XML element names **MUST** be spelled out and abbreviations are not permitted. See
1729 the exclusion below regarding the use of the suffix `Ref`.

1730 • XML attribute names **SHOULD** be spelled out and abbreviations **SHOULD** be
1731 avoided. The exception to this rule is the use of `id` when associated with an identi-
1732 fier. See the exclusion below regarding the use of the suffix `Ref`.

1733 • The abbreviation `Ref` for *Reference* is permitted as a suffix to element names of
1734 either a *Structural Element* or a *Data Entity* to provide an efficient method to asso-
1735 ciate information defined in another location in a *Data Model* without duplicating
1736 that original data or structure. See *Section 4.8* in *MTConnect Standard: Part 2.0 -*
1737 *Devices Information Model* for more information on *Reference*.

1738 6.2 XML Declaration

1739 The first section of a *Response Document* encoded with XML **SHOULD** be the *XML*
1740 *Declaration*. The declaration is a single element.

1741 An example of an *XML Declaration* would be:

Example 2: Example of xml declaration

```
1742 1 <?xml version="1.0" encoding="UTF-8"?>
```

1743 This element provides information regarding how the XML document is encoded and the
1744 character type used for that encoding. See the W3C website for more details on the XML
1745 declaration.

1746 6.3 Root Element

1747 Every *Response Document* **MUST** contain only one root element. The MTConnect Stan-
1748 dard defines `MTConnectDevices`, `MTConnectStreams`, `MTConnectAssets`, and
1749 `MTConnectError` as *Root Elements*.

1750 The *Root Element* specifies a specific *Response Document* and appears at the top of the
1751 document immediately following the *XML Declaration*.

1752 6.3.1 MTConnectDevices Root Element

1753 `MTConnectDevices` is the *Root Element* for the *MTConnectDevices Response Docu-*
1754 *ment*.

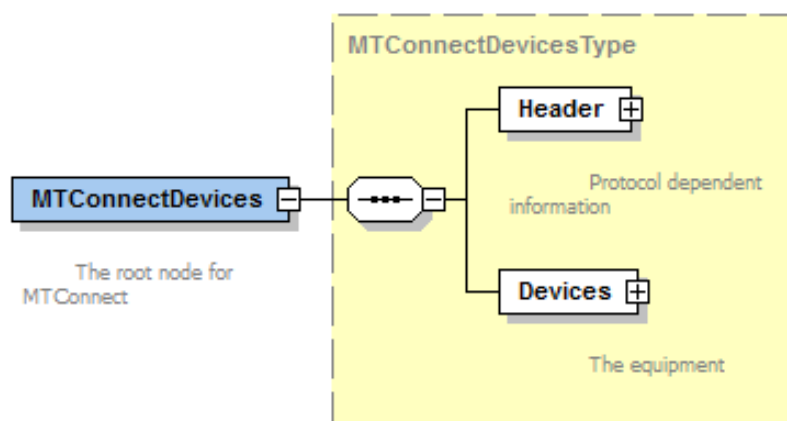

Figure 13: MTConnectDevices Structure

1755 MTConnectDevices **MUST** contain two *Child Elements* - Header and Devices.
 1756 Details for Header are defined in Section 6.5 - Document Header.

1757 Devices is an XML container that represents the *Document Body* for an *MTConnectDe-*
 1758 *VICES Response Document* – see Section 6.6 - Document Body. Details for the *semantic*
 1759 *data model* describing the contents for Devices are defined in *MTConnect Standard:*
 1760 *Part 2.0 - Devices Information Model*.

1761 MTConnectDevices also has a number of attributes. These attributes are defined in
 1762 Section 6.4 - Schema and Namespace Declaration.

1763 6.3.1.1 MTConnectDevices Elements

1764 An MTConnectDevices element **MUST** contain a Header and a Devices element.

Table 1: Elements for MTConnectDevices

Element	Description	Occurrence
Header	An XML container in an <i>MTConnect Response Document</i> that provides information from an <i>Agent</i> defining version information, storage capacity, and parameters associated with the data management within the <i>Agent</i> .	1

Continuation of Table 1		
Element	Description	Occurrence
Devices	The XML container in an <i>MTConnect Response Document</i> that provides the <i>Equipment Metadata</i> for each of the pieces of equipment associated with an <i>Agent</i> .	1

1765 6.3.2 MTConnectStreams Root Element

1766 MTConnectStreams is the *Root Element* for the *MTConnectStreams Response Document*.
 1767

Figure 14: MTConnectStreams Structure

1768 MTConnectStreams **MUST** contain two *Child Elements* - Header and Streams.

1769 Details for Header are defined in *Section 6.5 - Document Header*.

1770 Streams is an XML container that represents the *Document Body* for a *MTConnect-*
 1771 *Streams Response Document* – see *Section 6.6 - Document Body*. Details for the *semantic*
 1772 *data model* describing the contents for Streams are defined in *MTConnect Standard:*
 1773 *Part 3.0 - Streams Information Model*.

1774 MTConnectStreams also has a number of attributes. These attributes are defined in
 1775 *Section 6.4 - Schema and Namespace Declaration*.

1776 **6.3.2.1 MTConnectStreams Elements**

1777 An `MTConnectStreams` element **MUST** contain a `Header` and a `Streams` element.

Table 2: Elements for `MTConnectStreams`

Element	Description	Occurrence
Header	An XML container in an <i>MTConnect Response Document</i> that provides information from an <i>Agent</i> defining version information, storage capacity, and parameters associated with the data management within the <i>Agent</i> .	1
Streams	The XML container for the information published by an <i>Agent</i> in a <i>MTConnectStreams Response Document</i> .	1

1778 **6.3.3 MTConnectAssets Root Element**

1779 `MTConnectAssets` is the *Root Element* for the *MTConnectAssets Response Document*.

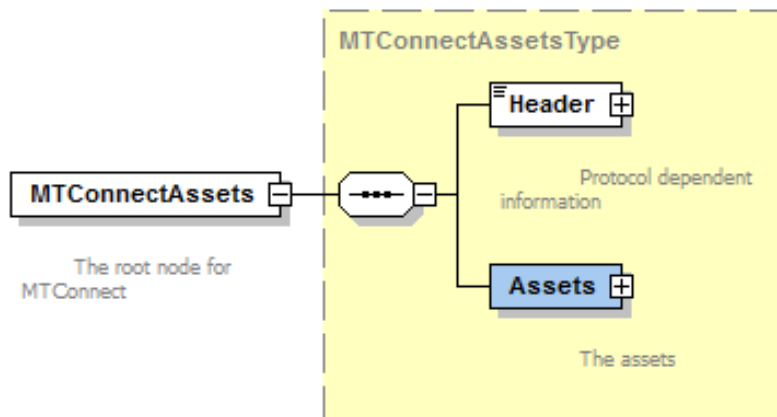

Figure 15: `MTConnectAssets` Structure

1780 `MTCConnectAssets` **MUST** contain two *Child Elements* - `Header` and `Assets`.

1781 Details for `Header` are defined in *Section 6.5 - Document Header*.

1782 `Assets` is an XML container that represents the *Document Body* for an *MTCConnectAssets Response Document* – see *Section 6.6 - Document Body*. Details for the *semantic data model* describing the contents for `Assets` are defined in *MTCConnect Standard: Part 4.0 - Assets Information Model*.

1786 `MTCConnectAssets` also has a number of attributes. These attributes are defined in *Section 6.4 - Schema and Namespace Declaration*.

1788 **6.3.3.1 MTCConnectAssets Elements**

1789 An `MTCConnectAssets` element **MUST** contain a `Header` and an `Assets` element.

Table 3: Elements for `MTCConnectAssets`

Element	Description	Occurrence
Header	An XML container in an <i>MTCConnect Response Document</i> that provides information from an <i>Agent</i> defining version information, storage capacity, and parameters associated with the data management within the <i>Agent</i> .	1
Assets	The XML container in an <i>MTCConnectAssets Response Document</i> that provides information for <i>MTCConnect Assets</i> associated with an <i>Agent</i> .	1

1790 **6.3.4 MTCConnectError Root Element**

1791 `MTCConnectError` is the *Root Element* for the *MTCConnectErrors Response Document*.

Figure 16: MTConnectError Structure

1792 MTConnectError **MUST** contain two *Child Elements* - Header and Errors.

1793 Note: When compatibility with *Version 1.0.1* and earlier of the MTConnect Standard
 1794 is required for an implementation, the *MTConnectErrors Response Document*
 1795 contains only a single Error *Data Entity* and the Errors *Child Element*
 1796 **MUST NOT** appear in the document.

1797 Details for Header are defined in *Section 6.5 - Document Header*.

1798 Errors is an XML container that represents the *Document Body* for an *MTConnectErrors*
 1799 *Response Document* – See *Section 6.6 - Document Body*. Details for the *semantic data*
 1800 *model* describing the contents for Errors are defined in *Section 9 - Error Information*
 1801 *Model*.

1802 MTConnectError also has a number of attributes. These attributes are defined in *Sec-*
 1803 *tion 6.4 - Schema and Namespace Declaration*.

1804 **6.3.4.1 MTConnectError Elements**

1805 An MTConnectError element **MUST** contain a Header and an Errors element.

Table 4: Elements for MTConnectError

Element	Description	Occurrence
Header	An XML container in an <i>MTConnect Response Document</i> that provides information from an <i>Agent</i> defining version information, storage capacity, and parameters associated with the data management within the <i>Agent</i> .	1
Errors	The XML container in an <i>MTConnectErrors Response Document</i> that provides information associated with errors encountered by an <i>Agent</i> .	1

1806 6.4 Schema and Namespace Declaration

1807 XML provides standard methods for declaring the *schema* and *namespace* associated with
 1808 a document encoded by XML. The declaration of the *schema* and *namespace* for MTCon-
 1809 nect *Response Documents* **MUST** be structured as attributes in the *Root Element* of the
 1810 document. XML defines these attributes as pseudo-attributes since they provide additional
 1811 information for the entire document and not just specifically for the *Root Element* itself.

1812 Note: If a *Response Document* contains sections that utilize different *schemas* and/or
 1813 *namespaces*, additional pseudo-attributes should appear in the document as de-
 1814 clared using standard conventions as defined by W3C.

1815 For further information on declarations refer to *Appendix C*.

1816 6.5 Document Header

1817 The *Document Header* is an XML container in an *MTConnect Response Document* that
 1818 provides information from an *Agent* defining version information, storage capacity, and
 1819 parameters associated with the data management within the *Agent*. This XML element is
 1820 called `Header`.

1821 `Header` **MUST** be the first XML element following the *Root Element* of any *Response*
 1822 *Document*. The `Header` XML element **MUST NOT** contain any *Child Elements*.

1823 The content of the `Header` element will be different for each type of *Response Document*.

1824 6.5.1 Header for MTConnectDevices

1825 The `Header` element for an *MTConnectDevices Response Document* defines information
 1826 regarding the creation of the document and the data storage capability of the *Agent* that
 1827 generated the document.

1828 6.5.1.1 XML Schema Structure for Header for MTConnectDevices

1829 The *XML Schema* in *Figure 17* represents the structure of the `Header` XML element that
 1830 **MUST** be provided for an *MTConnectDevices Response Document*.

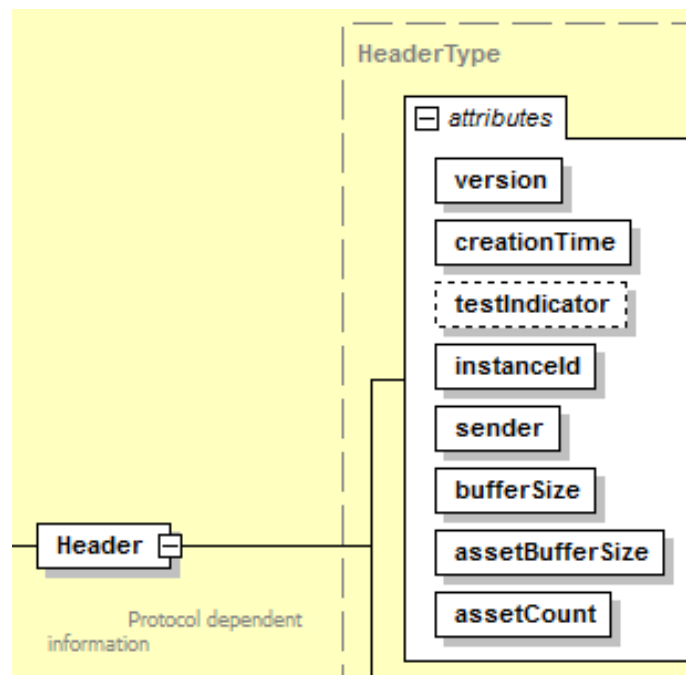

Figure 17: Header Schema Diagram for MTConnectDevices

1831 6.5.1.2 Attributes for Header for MTConnectDevices

1832 *Table 5* defines the attributes that may be used to provide additional information in the
 1833 `Header` element for an *MTConnectDevices Response Document*.

Table 5: MTConnectDevices Header

Attribute	Description	Occurrence
version	<p>The <i>major</i>, <i>minor</i>, and <i>revision</i> number of the MTConnect Standard that defines the <i>semantic data model</i> that represents the content of the <i>Response Document</i>. It also includes the revision number of the <i>schema</i> associated with that specific <i>semantic data model</i>.</p> <p>The value reported for <code>version</code> MUST be a series of four numeric values, separated by a decimal point, representing a <i>major</i>, <i>minor</i>, and <i>revision</i> number of the MTConnect Standard and the revision number of a specific <i>schema</i>.</p> <p>As an example, the value reported for <code>version</code> for a <i>Response Document</i> that was structured based on <i>schema</i> revision 10 associated with Version 1.4.0 of the MTConnect Standard would be: 1.4.0.10</p> <p><code>version</code> is a required attribute.</p>	1
creationTime	<p><code>creationTime</code> represents the time that an <i>Agent</i> published the <i>Response Document</i>.</p> <p><code>creationTime</code> MUST be reported in UTC (Coordinated Universal Time) format; e.g., "2010-04-01T21:22:43Z".</p> <p>Note: Z refers to UTC/GMT time, not local time.</p> <p><code>creationTime</code> is a required attribute.</p>	1

Continuation of Table 5		
Attribute	Description	Occurrence
testIndicator	<p>A flag indicating that the <i>Agent</i> that published the <i>Response Document</i> is operating in a test mode. The contents of the <i>Response Document</i> may not be valid and SHOULD be used for testing and simulation purposes only.</p> <p>The values reported for testIndicator are:</p> <ul style="list-style-type: none"> - TRUE: The <i>Agent</i> is functioning in a test mode. - FALSE: The <i>Agent</i> is not function in a test mode. <p>If testIndicator is not specified, the value for testIndicator MUST be interpreted to be FALSE.</p> <p>testIndicator is an optional attribute.</p>	0..1
instanceId	<p>A number indicating a specific instantiation of the <i>buffer</i> associated with the <i>Agent</i> that published the <i>Response Document</i>.</p> <p>The value reported for instanceId MUST be a unique unsigned 64-bit integer.</p> <p>The value for instanceId MUST be changed to a different unique number each time the <i>buffer</i> is cleared and a new set of data begins to be collected.</p> <p>instanceId is a required attribute.</p>	1

Continuation of Table 5		
Attribute	Description	Occurrence
sender	<p>An identification defining where the <i>Agent</i> that published the <i>Response Document</i> is installed or hosted.</p> <p>The value reported for <code>sender</code> MUST be either an IP Address or Hostname describing where the <i>Agent</i> is installed or the URL of the <i>Agent</i>; e.g., <code>http://<address>[:port]/</code>.</p> <p>Note: The port number need not be specified if it is the default HTTP port 80.</p> <p><code>sender</code> is a required attribute.</p>	1
bufferSize	<p>A value representing the maximum number of <i>Data Entities</i> that MAY be retained in the <i>Agent</i> that published the <i>Response Document</i> at any point in time.</p> <p>The value reported for <code>bufferSize</code> MUST be a number representing an unsigned 32-bit integer.</p> <p><code>bufferSize</code> is a required attribute.</p> <p>Note 1: <code>bufferSize</code> represents the maximum number of sequence numbers that MAY be stored in the <i>Agent</i>.</p> <p>Note 2: The implementer is responsible for allocating the appropriate amount of storage capacity required to accommodate the <code>bufferSize</code>.</p>	1

Continuation of Table 5		
Attribute	Description	Occurrence
assetBufferSize	<p>A value representing the maximum number of <i>Asset Documents</i> that can be stored in the <i>Agent</i> that published the <i>Response Document</i>.</p> <p>The value reported for assetBufferSize MUST be a number representing an unsigned 32-bit integer.</p> <p>assetBufferSize is a required attribute.</p> <p>Note: The implementer is responsible for allocating the appropriate amount of storage capacity required to accommodate the assetBufferSize.</p>	1
assetCount	<p>A number representing the current number of <i>Asset Documents</i> that are currently stored in the <i>Agent</i> as of the creationTime that the <i>Agent</i> published the <i>Response Document</i>.</p> <p>The value reported for assetCount MUST be a number representing an unsigned 32-bit integer and MUST NOT be larger than the value reported for assetBufferSize.</p> <p>assetCount is a required attribute.</p>	1

1834 *Example 3* is an example of a Header XML element for an *MTConnectDevices Response*
 1835 *Document*:

Example 3: Example of Header XML Element for MTConnectDevices

```

1836 1 <Header creationTime="2017-02-16T16:44:27Z"
1837 2   sender="MyAgent" instanceId="1268463594"
1838 3   bufferSize="131072" version="1.4.0.10"
1839 4   assetCount="54" assetBufferSize="1024"/>

```

1840 6.5.2 Header for MTConnectStreams

1841 The Header element for an *MTConnectStreams Response Document* defines informa-
 1842 tion regarding the creation of the document and additional information necessary for an
 1843 application to interact and retrieve data from the *Agent*.

1844 **6.5.2.1 XML Schema Structure for Header for MTConnectStreams**

1845 The XML Schema in *Figure 18* represents the structure of the `Header` XML element that
 1846 **MUST** be provided for an *MTConnectStreams Response Document*.

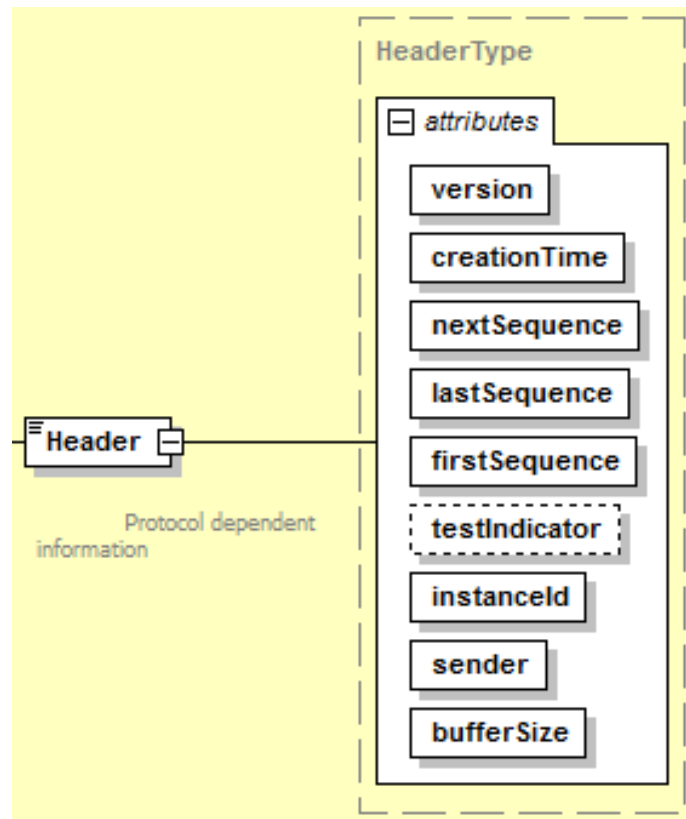

Figure 18: Header Schema Diagram for MTConnectStreams

1847 **6.5.2.2 Attributes for MTConnectStreams Header**

1848 *Table 6* defines the attributes that may be used to provide additional information in the
 1849 `Header` element for an *MTConnectStreams Response Document*.

Table 6: MTConnectStreams Header

Attribute	Description	Occurrence
version	<p>The <i>major</i>, <i>minor</i>, and <i>revision</i> number of the MTConnect Standard that defines the <i>semantic data model</i> that represents the content of the <i>Response Document</i>. It also includes the revision number of the <i>schema</i> associated with that specific <i>semantic data model</i>.</p> <p>The value reported for <code>version</code> MUST be a series of four numeric values, separated by a decimal point, representing a <i>major</i>, <i>minor</i>, and <i>revision</i> number of the MTConnect Standard and the revision number of a specific <i>schema</i>.</p> <p>As an example, the value reported for <code>version</code> for a <i>Response Document</i> that was structured based on <i>schema</i> revision 10 associated with Version 1.4.0 of the MTConnect Standard would be: 1.4.0.10</p> <p><code>version</code> is a required attribute.</p>	1
creationTime	<p><code>creationTime</code> represents the time that an <i>Agent</i> published the <i>Response Document</i>.</p> <p><code>creationTime</code> MUST be reported in UTC (Coordinated Universal Time) format; e.g., "2010-04-01T21:22:43Z".</p> <p>Note: Z refers to UTC/GMT time, not local time.</p> <p><code>creationTime</code> is a required attribute.</p>	1

Continuation of Table 6		
Attribute	Description	Occurrence
nextSequence	<p>A number representing the <i>sequence number</i> of the piece of <i>Streaming Data</i> that is the next piece of data to be retrieved from the <i>buffer</i> of the <i>Agent</i> that was not included in the Response Document published by the <i>Agent</i>.</p> <p>If the <i>Streaming Data</i> included in the Response Document includes the last piece of data stored in the <i>buffer</i> of the <i>Agent</i> at the time that the document was published, then the value reported for nextSequence MUST be equal to lastSequence + 1.</p> <p>The value reported for nextSequence MUST be a number representing an unsigned 64-bit integer.</p> <p>nextSequence is a required attribute.</p>	1
lastSequence	<p>A number representing the <i>sequence number</i> assigned to the last piece of <i>Streaming Data</i> that was added to the <i>buffer</i> of the <i>Agent</i> immediately prior to the time that the <i>Agent</i> published the Response Document.</p> <p>The value reported for lastSequence MUST be a number representing an unsigned 64-bit integer.</p> <p>lastSequence is a required attribute.</p>	1
firstSequence	<p>A number representing the <i>sequence number</i> assigned to the oldest piece of <i>Streaming Data</i> stored in the <i>buffer</i> of the <i>Agent</i> immediately prior to the time that the <i>Agent</i> published the Response Document.</p> <p>The value reported for firstSequence MUST be a number representing an unsigned 64-bit integer.</p> <p>firstSequence is a required attribute.</p>	1

1882 *Example 6* is an example of a Header XML element for an *MTCConnectErrors Response*
1883 *Document*:

Example 6: Example of Header XML Element for MTCConnectError

```

1884 1 <Header creationTime="2017-02-16T16:44:27Z"
1885 2   sender="MyAgent" instanceId="1268463594"
1886 3   bufferSize="131072" version="1.4.0.10"/>

```

1887 6.6 Document Body

1888 The *Document Body* contains the information that is published by an *Agent* in response
 1889 to a *Request* from a client software application. Each *Response Document* has a different
 1890 XML element that represents the *Document Body*.

1891 The structure of the content of the XML element representing the *Document Body* is de-
 1892 fined by the *semantic data models* defined for each *Response Document*.

1893 *Table 9* defines the relationship between each of the *Response Documents*, the XML ele-
 1894 ment that represents the *Document Body* for each document, and the *semantic data model*
 1895 that defines the structure for the content of each of the *Response Documents*:

Table 9: Relationship between Response Document and Semantic Data Model

Response Document	XML Element for Document Body	Semantic Data Model
<i>MtConnectDevices Response Document</i>	Devices	<i>MtConnect Standard: Part 2.0 - Devices Information Model</i>
<i>MtConnectStreams Response Document</i>	Streams	<i>MtConnect Standard: Part 3.0 - Streams Information Model</i>
<i>MtConnectAssets Response Document</i>	Assets	<i>MtConnect Standard: Part 4.0 - Assets Information Model</i>
<i>MtConnectErrors Response Document</i>	Errors Note: Errors MUST NOT be used when backwards compatibility with MtConnect Standard Version 1.0.1 and earlier is required.	<i>MtConnect Standard Part 1.0 - Overview and Fundamentals</i>

1896 6.7 Extensibility

1897 MTConnect is an extensible standard, which means that implementers **MAY** extend the
 1898 *Data Models* defined in the various sections of the MTConnect Standard to include in-
 1899 formation required for a specific implementation. When these *Data Models* are encoded
 1900 using XML, the methods for extending these *Data Models* are defined by the rules estab-
 1901 lished for extending any XML schema (see the W3C website for more details on extending
 1902 XML data models).

1903 The following are typical extensions that **MAY** be considered in the MTConnect *Data*
 1904 *Models*:

- 1905 • Additional `type` and `subType` values for *Data Entities*.
- 1906 • Additional *Structural Elements* as containers.
- 1907 • Additional Composition elements.
- 1908 • New *Asset* types that are sub-typed from the abstract *Asset* type.
- 1909 • *Child Elements* that may be added to specific XML elements contained within the
 1910 *MTConnect Information Models*. These extended elements **MUST** be identified in
 1911 a separate *namespace*.

1912 When extending an MTConnect *Data Model*, there are some basic rules restricting changes
 1913 to the MTConnect *Data Models*.

1914 When extending an MTConnect *Data Model*, an implementer:

- 1915 • **MUST NOT** add new value for category for *Data Entities*,
- 1916 • **MUST NOT** add new *Root Elements*,
- 1917 • **SHOULD NOT** add new *Top Level Components*, and
- 1918 • **MUST NOT** add any new attributes or include any sub-elements to *Composi-*
 1919 *tion*.

1920 Note: Throughout the documents additional information is provided where
 1921 extensibility may be acceptable or unacceptable to maintain compliance with
 1922 the MTConnect Standard.

1923 When a *schema* representing a *Data Model* is extended, the *schema* and *namespace* dec-
 1924 laration at the beginning of the corresponding *Response Document* **MUST** be updated to
 1925 reflect the new *schema* and *namespace* so that a client software application can properly
 1926 validate the *Response Document*.

1927 An XML example of a *schema* and *namespace* declaration, including an extended *schema*
 1928 and *namespace*, is shown in *Example 7*:

Example 7: Example of extended schema and namespace in declaration

```
1929 1 <?xml version="1.0" encoding="UTF-8"?>
1930 2   <MTConnectDevices
1931 3     xmlns:xsi=http://www.w3.org/2001/XMLSchema-instance
1932 4     xmlns="urn:mtconnect.org:MTConnectDevices:1.3"
1933 5     xmlns:m="urn:mtconnect.org:MTConnectDevices:1.3"
1934 6     xmlns:x="urn:MyLocation:MyFile:MyVersion"
1935 7     xsi:schemaLocation="urn:MyLocation:MyFile:MyVersion
1936 8       /schemas/MyFileName.xsd" />
```

1937 In this example:

1938 • `xmlns:x` is added in Line 6 to identify the *XML Schema* instance for the extended
 1939 *schema*. *Element Names* identified with an "x" prefix are associated with this spe-
 1940 cific *XML Schema* instance.

1941 Note: The "x" prefix **MAY** be replaced with any prefix that the implementer
 1942 chooses for identifying the extended *schema* and *namespace*.

1943 • `xsi:schemaLocation` is modified in Line 7 to associate the *namespace* URN
 1944 with the URL specifying the location of *schema* file.

1945 • `MyLocation`, `MyFile`, `MyVersion`, and `MyFileName` in Lines 6 and 7 **MUST**
 1946 be replaced by the actual name, version, and location of the extended *schema*.

1947 When an extended *schema* is implemented, each *Structural Element*, *Data Entity*, and
 1948 *MTConnect Asset* defined in the extended *schema* **MUST** be identified in each respective
 1949 *Response Document* by adding a prefix to the *XML Element Name* associated with that
 1950 *Structural Element*, *Data Entity*, or *MTConnect Asset*. The prefix identifies the *schema*
 1951 and *namespace* where that XML Element is defined.

1952 7 Protocol and Messaging

1953 An *Agent* performs two *major* communications tasks. It collects information from pieces
 1954 of equipment and it publishes MTConnect *Response Documents* in response to *Requests*
 1955 from client software applications.

1956 The MTConnect Standard does not address the method used by an *Agent* to collect in-
 1957 formation from a piece of equipment. The relationship between the *Agent* and a piece of
 1958 equipment is implementation dependent. The *Agent* may be fully integrated into the piece
 1959 of equipment or the *Agent* may be independent of the piece of equipment. Implementation
 1960 of the relationship between a piece of equipment and an *Agent* is the responsibility of the
 1961 supplier of the piece of equipment and/or the implementer of the *Agent*.

1962 The communications mechanism between an *Agent* and a client software application re-
 1963 quires the following primary components:

1964 • *Physical Connection*: The network transmission technologies that physically inter-
 1965 connect an *Agent* and a client software application. Examples of a *Physical Con-*
 1966 *nection* would be an Ethernet network or a wireless connection.

1967 • *Transport Protocol*: A set of capabilities that provide the rules and procedures used
 1968 to transport information between an *Agent* and a client software application through
 1969 a *Physical Connection*.

1970 • *Application Programming Interface*: The *Request* and *Response* interactions that
 1971 occur between an *Agent* and a client software application.

1972 • *Message*: The content of the information that is exchanged. The *Message* includes
 1973 both the content of the MTConnect *Response Document* and any additional informa-
 1974 tion required for the client software application to interpret the *Response Document*.

1975 Note: The *Physical Connections*, *Transport Protocols*, and *Application Pro-*
 1976 *gramming Interface* supported by an *Agent* are independent of the *Message* it-
 1977 self; i.e., the information contained in the MTConnect *Response Documents* is
 1978 not changed based on the methods used to transport those documents to a client
 1979 software application.

1980 An *Agent* **MAY** support multiple methods for communicating with client software ap-
 1981 plications. The MTConnect Standard specifies one methodology for communicating that
 1982 **MUST** be supported by every *Agent*. This methodology is a REST, which defines a state-
 1983 less, client-server communications architecture. This REST interface is the architectural
 1984 pattern that specifies the exchange of information between an *Agent* and a client software

1985 application. REST dictates that a server has no responsibility for tracking or coordinating
1986 with a client software application regarding which information or how much information
1987 the client software application may request from a server. This removes the burden for
1988 a server to keep track of client sessions. An *Agent* **MUST** be implemented as a server
1989 supporting the RESTful interface.

1990 8 HTTP Messaging Supported by an Agent

1991 This section describes the application of *HTTP Messaging* applied to a REST interface that
1992 **MUST** be supported by an *Agent* to realize the *MTConnect Request/Response* information
1993 exchange functionality.

1994 8.1 REST Interface

1995 An *Agent* **MUST** provide a REST interface that supports HTTP version 1.0 to commu-
1996 nicate with client applications. This interface **MUST** support HTTP (RFC7230) and use
1997 URIs (RFC3986) to identify specific information requested from an *Agent*. HTTP is most
1998 often implemented on top of the Transmission Control Protocol (TCP) that provides an
1999 ordered byte stream of data and the Internet Protocol (IP) that provides unified address-
2000 ing and routing between computers. However, additional interfaces to an *Agent* may be
2001 implemented in conjunction with any other communications technologies.

2002 The REST interface supports an *Application Programming Interface* (API) that adheres
2003 to the architectural principles of a stateless, uniform interface to retrieve data and other
2004 information related to either pieces of equipment or *MTConnect Assets*. The API allows
2005 for access, but not modification of data stored within the *Agent* and is nullipotent, meaning
2006 it will not produce any side effects on the information stored in an *Agent* or the function
2007 of the *Agent* itself.

2008 *HTTP Messaging* is comprised of two basic functions – an *HTTP Request* and an *HTTP*
2009 *Response*. A client software application forms a *Request* for information from an *Agent*
2010 by specifying a specific set of information using an *HTTP Request*. In response, an *Agent*
2011 provides either an *HTTP Response* or replies with an *HTTP Error Message* as defined
2012 below.

2013 8.2 HTTP Request

2014 The *MTConnect Standard* defines that an *Agent* **MUST** support the HTTP GET verb – no
2015 other HTTP methods are required to be supported.

2016 An *HTTP Request* **MAY** include three sections:

- 2017 • an *HTTP Request Line*
- 2018 • *HTTP Header Fields*

- 2019 • an *HTTP Body*

2020 The MTConnect Standard defines that an *HTTP Request* issued by a client application
2021 **SHOULD** only have two sections:

- 2022 • an *HTTP Request Line*

- 2023 • *HTTP Header Fields*

2024 The *HTTP Request Line* identifies the specific information being requested by the client
2025 software application. If an *Agent* receives any information in an *HTTP Request* that is not
2026 specified in the MTConnect Standard, the *Agent* **MAY** ignore it.

2027 The structure of an *HTTP Request Line* consists of the following portions:

- 2028 • *HTTP Request Method*: GET

- 2029 • *HTTP Request URL*: `http://<authority>/<path>[?<query>]`

- 2030 • *HTTP Version*: HTTP/1.0

2031 For the following discussion, the *HTTP Request URL* will only be considered since the
2032 Method will always be GET and the MTConnect Standard only requires HTTP/1.0.

2033 **8.2.1 authority Portion of an HTTP Request Line**

2034 The *authority* portion consists of the DNS name or IP address associated with an
2035 *Agent* and an optional TCP port number [`:port`] that the *Agent* is listening to for incoming
2036 *Requests* from client software applications. If the port number is the default Port 80, `port`
2037 is not required.

2038 Example forms for *authority* are:

- 2039 • `http://machine/`

- 2040 • `http://machine:5000/`

- 2041 • `http://192.168.1.2:5000/`

2042 8.2.2 path Portion of an HTTP Request Line

2043 The <Path> portion of the *HTTP Request Line* has the follow segments:

- 2044 • /<name or uuid>/<request>

2045 In this portion of the *HTTP Request Line*, name or uuid designates that the information to
 2046 be returned in a *Response Document* is associated with a specific piece of equipment that
 2047 has published data to the *Agent*. See Part 2 - *Devices Information Model* for details on
 2048 name or uuid for a piece of equipment.

2049 Note: If name or uuid are not specified in the *HTTP Request Line*, an *Agent* **MUST**
 2050 return the information for all pieces of equipment that have published data to
 2051 the *Agent* in the *Response Document*.

2052 In the <Path> portion of the *HTTP Request Line*, <request> designates one of the
 2053 *Requests* defined in Section 5.4 - *Request/Response Information Exchange*. The value
 2054 for <request> **MUST** be probe, current, sample, or asset(s) representing the
 2055 *Probe Request*, *Current Request*, *Sample Request*, and *Asset Request* respectively.

2056 8.2.3 query Portion of an HTTP Request Line

2057 The [?<query>] portion of the *HTTP Request Line* designates an HTTP *Query*. *Query* is
 2058 a string of parameters that define filters used to refine the content of a *Response Document*
 2059 published in response to an *HTTP Request*.

2060 8.3 MTConnect Request/Response Information Exchange Implemented 2061 with HTTP

2062 An *Agent* **MUST** support *Probe Requests*, *Current Requests*, *Sample Requests*, and *Asset*
 2063 *Requests*.

2064 The following sections define how the *HTTP Request Line* is structured to support each of
 2065 these types of *Requests* and the information that an *Agent* **MUST** provide in response to
 2066 these *Requests*.

2067 8.3.1 Probe Request Implemented Using HTTP

2068 An *Agent* responds to a *Probe Request* with an *MTConnectDevices Response Document*
 2069 that contains the *Equipment Metadata* for pieces of equipment that are requested and cur-
 2070 rently represented in the *Agent*.

2071 There are two forms of the *Probe Request*:

2072 • The first form includes an *HTTP Request Line* that does not specify a specific path
 2073 portion (name or uuid). In response to this *Request*, the *Agent* returns an *MT-*
 2074 *ConnectDevices Response Document* with information for all pieces of equipment
 2075 represented in the *Agent*.

2076 1. `http://<authority>/probe`

2077 • The second form includes an *HTTP Request Line* that specifies a specific path por-
 2078 tion that defines either a name or uuid. In response to this *Request*, the *Agent*
 2079 returns an *MTConnectDevices Response Document* with information for only the
 2080 one piece of equipment associated with that name or uuid.

2081 1. `http://<authority>/<name or uuid>/probe`

2082 8.3.1.1 Path Portion of the HTTP Request Line for a Probe Request

2083 The following segments of `path` **MUST** be supported in an *HTTP Request Line* for a
 2084 *Probe Request*:

Table 10: Path of the HTTP Request Line for a Probe Request

Path Segments	Description
name or uuid	If present, specifies that only the <i>Equipment Metadata</i> for the piece of equipment represented by the <code>name</code> or <code>uuid</code> will be published. If not present, <i>Metadata</i> for all pieces of equipment associated with the <i>Agent</i> will be published.
<request>	<code>probe</code> MUST be provided.

2085 8.3.1.2 Query Portion of the HTTP Request Line for a Probe Request

2086 The *HTTP Request Line* for a *Probe Request* **SHOULD NOT** contain a query. If the

2087 *Request* does contain a *query*, the *Agent* **MUST** ignore the *query*.

2088 8.3.1.3 Response to a Probe Request

2089 The *Response* to a *Probe Request* **SHOULD** be an *MtConnectDevices Response Document* for one or more pieces of equipment as designated by the *path* portion of the
2090 *Request*.
2091

2092 The *Response Document* returned in response to a *Probe Request* **MUST** always provide
2093 the most recent information available to an *Agent*.

2094 The *Response* **MUST** also include an *HTTP Status Code*. If problems are encountered by
2095 an *Agent* while responding to a *Probe Request*, the *Agent* **MUST** also publish an *MtConnectErrors Response Document*.
2096

2097 8.3.1.4 HTTP Status Codes for a Probe Request

2098 The following *HTTP Status Codes* **MUST** be supported as possible responses to a *Probe*
2099 *Request*:

Table 11: HTTP Status Codes for a Probe Request

HTTP Status Code	Code Name	Description
200	OK	The <i>Request</i> was handled successfully.
400	Bad Request	The <i>Request</i> could not be interpreted. The <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i> . Also, the <i>Agent</i> MUST publish an <i>MtConnectErrors Response Document</i> that identifies either <code>INVALID_URI</code> or <code>INVALID_REQUEST</code> as the <code>errorCode</code> .
404	Not Found	The <i>Request</i> could not be interpreted. The <i>Agent</i> MUST return a 404 <i>HTTP Status Code</i> . Also, the <i>Agent</i> MUST publish an <i>MtConnectErrors Response Document</i> that identifies <code>NO_DEVICE</code> as the <code>errorCode</code> .

Continuation of Table 11		
HTTP Status Code	Code Name	Description
405	Method Not Allowed	<p>A method other than GET was specified in the <i>Request</i> or the piece of equipment specified in the <i>Request</i> could not be found.</p> <p>The <i>Agent</i> MUST return a 405 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies UNSUPPORTED as the <code>errorCode</code>.</p>
406	Not Acceptable	<p>The <i>HTTP Accept Header</i> in the <i>Request</i> was not one of the supported representations.</p> <p>The <i>Agent</i> MUST return a 406 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies UNSUPPORTED as the <code>errorCode</code>.</p>
431	Request Header Fields Too Large	<p>The fields in the <i>HTTP Request</i> exceed the limit of the implementation of the <i>Agent</i>.</p> <p>The <i>Agent</i> MUST return a 431 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies INVALID_REQUEST as the <code>errorCode</code>.</p>
500	Internal Server Error	<p>There was an unexpected error in the <i>Agent</i> while responding to a <i>Request</i>.</p> <p>The <i>Agent</i> MUST return a 500 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies INTERNAL_ERROR as the <code>errorCode</code>.</p>

2100 8.3.2 Current Request Implemented Using HTTP

2101 An *Agent* responds to a *Current Request* with an *MTCConnectStreams Response Document*
 2102 that contains the current value of *Data Entities* associated with each piece of *Streaming*
 2103 *Data* available from the *Agent*, subject to any filtering defined in the *Request*.

2104 There are two forms of the *Current Request*:

2105 • The first form is given without a specific path portion (*name* or *uuid*). In response
 2106 to this *Request*, the *Agent* returns an *MTCConnectStreams Response Document* with
 2107 information for all pieces of equipment represented in the *buffer* of the *Agent*.

2108 1. `http://<authority>/current[?query]`

2109 • The second form includes a specific path portion that defines either a *name* or *uuid*.
 2110 In response to this *Request*, the *Agent* returns an *MTCConnectStreams Response Doc-*
 2111 *ument* with information for only the one piece of equipment associated with the
 2112 *name* or *uuid* defined in the *Request*.

2113 1. `http://<authority>/<name or uuid>/current[?query]`

2114 8.3.2.1 Path Portion of the HTTP Request Line for a Current Request

2115 The following segments of path **MUST** be supported for an *HTTP Request Line* for a
 2116 *Current Request*:

Table 12: Path of the HTTP Request Line for a Current Request

Path Segments	Description
<code>name</code> or <code>uuid</code>	If present, specifies that only the <i>Equipment Metadata</i> for the piece of equipment represented by the <code>name</code> or <code>uuid</code> will be published. If not present, <i>Metadata</i> for all pieces of equipment associated with the <i>Agent</i> will be published.
<code><request></code>	<code>current</code> MUST be provided.

2117 8.3.2.2 Query Portion of the HTTP Request Line for a Current Request

2118 A *Query* may be used to more precisely define the specific information to be included
 2119 in a *Response Document*. Multiple parameters may be used in a *Query* to further refine

2120 the information to be included. When multiple parameters are provided, each parameter
 2121 is separated by an ampersand (&) character and each parameter appears only once in the
 2122 *Query*. The parameters within the *Query* may appear in any sequence.

2123 The following query parameters **MUST** be supported in an *HTTP Request Line* for a
 2124 *Current Request*:

Table 13: Query Parameters of the HTTP Request Line for a Current Request

Query Parameters	Description
path	<p>An XPath that defines specific information or a set of information to be included in an <i>MTCConnectStreams Response Document</i>.</p> <p>The value for the XPath is the location of the information defined in the <i>Devices Information Model</i> that represents the <i>Structural Element(s)</i> and/or the specific <i>Data Entities</i> to be included in the <i>MTCConnectStreams Response Document</i> .</p> <p>When a <i>Component</i> element is referenced by the XPath, all <i>Lower Level</i> components and the <i>Data Entities</i> associated with those elements MUST be included in the <i>MTCConnectStreams Response Document</i>.</p>

Continuation of Table 13	
Query Parameters	Description
at	<p>Requests that the <i>MTConnect Response Documents</i> MUST include the current value for all <i>Data Entities</i> relative to the time that a specific <i>sequence number</i> was recorded.</p> <p>The value associated with the <code>at</code> parameter references a specific <i>sequence number</i>. The value MUST be an unsigned 64-bit value.</p> <p>The <code>at</code> parameter MUST NOT be used in conjunction with the <code>interval</code> parameter since this would cause an <i>Agent</i> to repeatedly return the same data.</p> <p>If the value provided for the <code>at</code> parameter is a negative number or is not a, the <i>Request</i> MUST be determined to be invalid. The <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTConnectErrors Response Document</i> that identifies an <code>INVALID_REQUEST</code> <code>errorCode</code>.</p> <p>If the value provided for the <code>at</code> parameter is either lower than the value of <code>firstSequence</code> or greater than the value of <code>lastSequence</code>, the <i>Request</i> MUST be determined to be invalid. The <i>Agent</i> MUST return a 404 <i>HTTP Status Code</i>. The <i>Agent</i> MUST also publish an <i>MTConnectErrors Response Document</i> that identifies an <code>OUT_OF_RANGE</code> <code>errorCode</code>.</p> <p>Note: Some information stored in the <i>buffer</i> of an <i>Agent</i> may not be returned for a <i>Current Request</i> with a <i>Query</i> containing an <code>at</code> parameter if the <i>sequence number</i> associated with the most current value for that information is greater than the <i>sequence number</i> specified in the <i>Query</i>.</p>
interval	<p>The <i>Agent</i> MUST continuously publish <i>Response Documents</i> when the query parameters include <code>interval</code> using the value as the period between adjacent publications.</p> <p>The <code>interval</code> value MUST be in milliseconds, and MUST be a positive integer greater than zero (0).</p> <p>The <i>Query</i> MUST NOT specify both <code>interval</code> and <code>at</code> parameters.</p>

2125 **8.3.2.3 Response to a Current Request**

2126 The *Response* to a *Current Request* **SHOULD** be an *MTCConnectStreams Response Document* for one or more pieces of equipment designated by the `path` portion of the *Request*.

2128 The *Response* to a *Current Request* **MUST** always provide the most recent information
2129 available to an *Agent* or, when the `at` parameter is specified, the value of the data at the
2130 given *sequence number*.

2131 The *Data Entities* provided in the *MTCConnectStreams Response Document* will be limited
2132 to those specified in the combination of the `path` segment of the *Current Request* and the
2133 value of the XPath defined for the `path` attribute provided in the `query` segment of that
2134 *Request*.

2135 8.3.2.4 HTTP Status Codes for a Current Request

2136 The following *HTTP Status Codes* **MUST** be supported as possible responses to a *Current*
2137 *Request*:

Table 14: HTTP Status Codes for a Current Request

HTTP Status Code	Code Name	Description
200	OK	The <i>Request</i> was handled successfully.
400	Bad Request	<p>The <i>Request</i> could not be interpreted.</p> <p>The <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies either <code>INVALID_URI</code>, <code>INVALID_REQUEST</code>, or <code>INVALID_XPATH</code> as the <code>errorCode</code>.</p> <p>If the <code>query</code> parameters do not contain a valid value or include an invalid parameter, the <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies <code>QUERY_ERROR</code> as the <code>errorCode</code>.</p>

Continuation of Table 14		
HTTP Status Code	Code Name	Description
404	Not Found	<p>The <i>Request</i> could not be interpreted.</p> <p>The <i>Agent</i> MUST return a 404 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies NO_DEVICE as the <code>errorCode</code>.</p> <p>If the value of the <code>at</code> parameter was greater than the <code>lastSequence</code> or is less than the <code>firstSequence</code>, the <i>Agent</i> MUST return a 404 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies OUT_OF_RANGE as the <code>errorCode</code>.</p>
405	Method Not Allowed	<p>A method other than GET was specified in the <i>Request</i> or the piece of equipment specified in the <i>Request</i> could not be found.</p> <p>The <i>Agent</i> MUST return a 405 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies UNSUPPORTED as the <code>errorCode</code>.</p>
406	Not Acceptable	<p>The <i>HTTP Accept Header</i> in the <i>Request</i> was not one of the supported representations.</p> <p>The <i>Agent</i> MUST return a 406 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies UNSUPPORTED as the <code>errorCode</code>.</p>
431	Request Header Fields Too Large	<p>The fields in the <i>HTTP Request</i> exceed the limit of the implementation of the <i>Agent</i>.</p> <p>The <i>Agent</i> MUST return a 431 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies INVALID_REQUEST as the <code>errorCode</code>.</p>

Continuation of Table 14		
HTTP Status Code	Code Name	Description
500	Internal Server Error	<p>There was an unexpected error in the <i>Agent</i> while responding to a <i>Request</i>.</p> <p>The <i>Agent</i> MUST return a 500 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies INTERNAL_ERROR as the <code>errorCode</code>.</p>

2138 8.3.3 Sample Request Implemented Using HTTP

2139 An *Agent* responds to a *Sample Request* with an *MConnectStreams Response Document*
 2140 that contains a set of values for *Data Entities* currently available for *Streaming Data* from
 2141 the *Agent*, subject to any filtering defined in the *Request*.

2142 There are two forms to the *Sample Request*:

2143 • The first form is given without a specific `path` portion (name or uuid). In re-
 2144 sponse to this *Request*, the *Agent* returns an *MConnectStreams Response Docu-*
 2145 *ment* with information for all pieces of equipment represented in the *Agent*.

2146 1. `http://<authority>/sample[?query]`

2147 • The second form includes a specific `path` portion that defines either a name or
 2148 uuid.

2149 In response to this *Request*, the *Agent* returns an *MConnectStreams Response Doc-*
 2150 *ument* with information for only the one piece of equipment associated with the
 2151 name or uuid defined in the *Request*.

2152 1. `http://<authority>/<name or uuid>/sample?query`

2153 8.3.3.1 Path Portion of the HTTP Request Line for a Sample Request

2154 The following segments of `path` **MUST** be supported in the *HTTP Request Line* for a
 2155 *Sample Request*:

Table 15: Path of the HTTP Request Line for a Sample Request

Path Segments	Description
name or uuid	If present, specifies that only the <i>Equipment Metadata</i> for the piece of equipment represented by the <code>name</code> or <code>uuid</code> will be published. If not present, <i>Metadata</i> for all pieces of equipment associated with the <i>Agent</i> will be published.
<request>	<code>sample</code> MUST be provided.

2156 8.3.3.2 Query Portion of the HTTP Request Line for a Sample Request

2157 A *Query* may be used to more precisely define the specific information to be included
 2158 in a *Response Document*. Multiple parameters may be used in a *Query* to further refine
 2159 the information to be included. When multiple parameters are provided, each parameter
 2160 is separated by an `&` character and each parameter appears only once in the *Query*. The
 2161 parameters within the *Query* may appear in any sequence.

2162 The following *query* parameters **MUST** be supported in an *HTTP Request Line* for a
 2163 *Sample Request*:

Table 16: Query Parameters of the HTTP Request Line for a Sample Request

Query Parameters	Description
path	An XPath that defines specific information or a set of information to be included in an <i>MTCConnectStreams Response Document</i> . The value for the XPath is the location of the information defined in the <i>Devices Information Model</i> that represents the <i>Structural Element(s)</i> and/or the specific <i>Data Entities</i> to be included in the <i>MTCConnectStreams Response Document</i> . When a <i>Component</i> element is referenced by the XPath, all <i>Lower Level</i> components and the <i>Data Entities</i> associated with those elements MUST be included in the <i>MTCConnectStreams Response Document</i> .

Continuation of Table 16	
Query Parameters	Description
from	<p>The <code>from</code> parameter designates the <i>sequence number</i> of the first <i>observation</i> in the <i>buffer</i> the <i>Agent</i> MUST consider publishing in the <i>Response Document</i>.</p> <p>The value of <code>from</code> MUST be an unsigned 64-bit integer.</p> <p>If <code>from</code> is zero (0), it MUST be set to the <code>firstSequence</code>, the oldest <i>observation</i> in the <i>buffer</i>.</p> <p>If <code>from</code> and <code>count</code> parameters are not given, <code>from</code> MUST default to the <code>firstSequence</code>.</p> <p>If <code>from</code> is not given and <code>count</code> parameter is given, see <code>count</code> for default behavior.</p> <p>If the <code>from</code> parameter is less than the <code>firstSequence</code> or greater than <code>lastSequence</code>, the <i>Agent</i> MUST return a 404 <i>HTTP Status Code</i> and MUST publish an <i>MTConnectErrors Response Document</i> with an <code>OUT_OF_RANGE</code> <code>errorCode</code>.</p> <p>If the <code>from</code> parameter is not a positive numeric value, the <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i> and MUST publish an <i>MTConnectErrors Response Document</i> with an <code>INVALID_REQUEST</code> <code>errorCode</code>.</p>

Continuation of Table 16	
Query Parameters	Description
interval	<p>The <i>Agent</i> MUST continuously publish <i>Response Documents</i> when the query parameters include <code>interval</code> using the value as the minimum period between adjacent publications.</p> <p>The <code>interval</code> value MUST be in milliseconds, and MUST be a positive integer greater than or equal to zero (0).</p> <p>The <i>Query</i> MUST NOT specify both <code>interval</code> and <code>from</code> parameters.</p> <p>If the value for the <code>interval</code> parameter is zero (0), the <i>Agent</i> MUST publish <i>Response Documents</i> at the fastest rate possible.</p> <p>If the period between the publication of a <i>Response Document</i> and reception of <i>observations</i> exceeds the <code>interval</code>, the <i>Agent</i> MUST wait for a maximum of <code>heartbeat</code> milliseconds for <i>observations</i>. Upon the arrival of <i>observations</i>, the <i>Agent</i> MUST immediately publish a <i>Response Document</i>. When the period equals or exceeds the <code>heartbeat</code>, the <i>Agent</i> MUST publish an empty <i>Response Document</i>.</p>

Continuation of Table 16	
Query Parameters	Description
count	<p>The <code>count</code> parameter designates the maximum number of <i>observations</i> the <i>Agent</i> MUST publish in the <i>Response Document</i>.</p> <p>The value of <code>count</code> MUST be a signed integer.</p> <p>The <code>count</code> MUST NOT be zero (0).</p> <p>When the <code>count</code> is greater than zero (0), the <code>from</code> parameter MUST default to the <code>firstSequence</code>. The evaluation of <i>observations</i> starts at <code>from</code> and moves forward accumulating newer <i>observations</i> until the number of <i>observations</i> equals the <code>count</code> or the <i>observation</i> at <code>lastSequence</code> is considered.</p> <p>When the <code>count</code> is less than zero (0), the <code>from</code> parameter MUST default to the <code>lastSequence</code>. The evaluation of <i>observations</i> starts at <code>from</code> and moves backward accumulating older <i>observations</i> until the number of <i>observations</i> equals the absolute value of <code>count</code> or the <i>observation</i> at <code>firstSequence</code> is considered.</p> <p><code>count</code> MUST NOT be less than zero (0) when an <code>interval</code> parameter is given.</p> <p>If <code>count</code> is not provided, it MUST default to 100.</p> <p>If the absolute value of <code>count</code> is greater than the size of the <i>buffer</i> or equal to zero (0), the <i>Agent</i> MUST return a 404 <i>HTTP Status Code</i> and MUST publish an <i>MtConnectErrors Response Document</i> with an <code>OUT_OF_RANGE</code> <code>errorCode</code>.</p> <p>If the <code>count</code> parameter is not a numeric value, the <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i> and MUST publish an <i>MtConnectErrors Response Document</i> with an <code>INVALID_REQUEST</code> <code>errorCode</code>.</p>

Continuation of Table 16	
Query Parameters	Description
heartbeat	<p>Sets the time period for the <i>heartbeat</i> function in an <i>Agent</i>.</p> <p>The value for <i>heartbeat</i> represents the amount of time after a <i>Response Document</i> has been published until a new <i>Response Document</i> MUST be published, even when no new data is available.</p> <p>The value for <i>heartbeat</i> is defined in milliseconds.</p> <p>If no value is defined for <i>heartbeat</i>, the value SHOULD default to 10 seconds.</p> <p><i>heartbeat</i> MUST only be specified if <i>interval</i> is also specified.</p>

2164 8.3.3.3 Response to a Sample Request

2165 The *Response* to a *Sample Request* **SHOULD** be an *MTConnectStreams Response Document*
 2166 for one or more pieces of equipment designated by the *path* portion of the *Request*.

2167 The *Response* to a *Sample Request* **MUST** always provide the most recent information
 2168 available to an *Agent* or, when the *at* parameter is specified, the value of the data at the
 2169 given *sequence number*.

2170 The *Data Entities* provided in the *MTConnectStreams Response Document* will be limited
 2171 to those specified in the combination of the *path* segment of the *Sample Request* and the
 2172 value of the XPath defined for the *path* attribute provided in the *query* segment of that
 2173 *Request*.

2174 When the value of *from* references the value of the next *sequence number* (*nextSe-*
 2175 *quence*) and there are no additional *Data Entities* available in the buffer, the response
 2176 document will have an empty `<Streams/>` element in the *MTConnectStreams* doc-
 2177 ument to indicate no data is available at the point in time that the *Agent* published the
 2178 *Response Document*.

2179 8.3.3.4 HTTP Status Codes for a Sample Request

2180 The following *HTTP Status Codes* **MUST** be supported as possible responses to a *Sample*
 2181 *Request*:

Table 17: HTTP Status Codes for a Sample Request

HTTP Status Code	Code Name	Description
200	OK	The <i>Request</i> was handled successfully.
400	Bad Request	<p>The <i>Request</i> could not be interpreted.</p> <p>The <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies either <code>INVALID_URI</code>, <code>INVALID_REQUEST</code>, or <code>INVALID_XPATH</code> as the <code>errorCode</code>.</p> <p>If the query parameters do not contain a valid value or include an invalid parameter, the <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies <code>QUERY_ERROR</code> as the <code>errorCode</code>.</p>
404	Not Found	<p>The <i>Request</i> could not be interpreted.</p> <p>The <i>Agent</i> MUST return a 404 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies <code>NO_DEVICE</code> as the <code>errorCode</code>.</p> <p>If the value of the <code>at</code> parameter was greater than the <code>lastSequence</code> or is less than the <code>firstSequence</code>, the <i>Agent</i> MUST return a 404 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies <code>OUT_OF_RANGE</code> as the <code>errorCode</code>.</p>
405	Method Not Allowed	<p>A method other than GET was specified in the <i>Request</i> or the piece of equipment specified in the <i>Request</i> could not be found.</p> <p>The <i>Agent</i> MUST return a 405 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies <code>UNSUPPORTED</code> as the <code>errorCode</code>.</p>

Continuation of Table 17		
HTTP Status Code	Code Name	Description
406	Not Acceptable	<p>The <i>HTTP Accept Header</i> in the <i>Request</i> was not one of the supported representations.</p> <p>The <i>Agent</i> MUST return a 406 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies UNSUPPORTED as the <code>errorCode</code>.</p>
431	Request Header Fields Too Large	<p>The fields in the <i>HTTP Request</i> exceed the limit of the implementation of the <i>Agent</i>.</p> <p>The <i>Agent</i> MUST return a 431 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies INVALID_REQUEST as the <code>errorCode</code>.</p>
500	Internal Server Error	<p>There was an unexpected error in the <i>Agent</i> while responding to a <i>Request</i>.</p> <p>The <i>Agent</i> MUST return a 500 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MConnectErrors Response Document</i> that identifies INTERNAL_ERROR as the <code>errorCode</code>.</p>

2182 8.3.4 Asset Request Implemented Using HTTP

2183 An *Agent* responds to an *Asset Request* with an *MConnectAssets Response Document*
 2184 that contains information for *MConnect Assets* from the *Agent*, subject to any filtering
 2185 defined in the *Request*.

2186 There are multiple forms to the *Asset Request*:

- 2187 • The first form is given without a specific path portion (name or uuid). In re-
 2188 sponse to this *Request*, the *Agent* returns an *MConnectAssets Response Document*
 2189 that contains information for all *Asset Document* represented in the *Agent*.

2190 1. `http://<authority>/assets`

- 2191 • The second form includes a specific path portion that defines the identity (as-
 2192 set_id) for one or more specific *Asset Documents*. In response to this *Request*,
 2193 the *Agent* returns an *MTCConnectAssets Response Document* that contains informa-
 2194 tion for the specific Assets represented in the *Agent* and defined by each of the
 2195 asset_id values provided in the *Request*. Each asset_id is separated by a ";".
 2196 1. http://<authority>/asset/asset_id;asset_id;asset_id....

2197 Note: An *HTTP Request Line* may include combinations of path and query to
 2198 achieve the desired set of *Asset Documents* to be included in a specific *MT-*
 2199 *ConnectAssets Response Document*.

2200 8.3.4.1 Path Portion of the HTTP Request Line for an Asset Request

2201 The following segments of path **MUST** be supported in the *HTTP Request Line* for an
 2202 *Asset Request*:

Table 18: Path of the HTTP Request Line for an Asset Request

Path Segments	Description
<request>	asset or assets MUST be provided.
asset_id	Identifies the id attribute of an <i>MTCConnect Asset</i> to be provided by an <i>Agent</i> .

2203 8.3.4.2 Query Portion of the HTTP Request Line for an Asset Request

2204 A *Query* may be used to more precisely define the specific information to be included
 2205 in a *Response Document*. Multiple parameters may be used in a *Query* to further refine
 2206 the information to be included. When multiple parameters are provided, each parameter
 2207 is separated by an & character and each parameter appears only once in the *Query*. The
 2208 parameters within the *Query* may appear in any sequence.

2209 The following query parameters **MUST** be supported in an *HTTP Request Line* for an
 2210 *Asset Request*:

Table 19: Query Parameters of the HTTP Request Line for an Asset Request

Query Parameters	Description
type	<p>Defines the type of <i>MTCConnect Asset</i> to be returned in the <i>MTCConnectAssets Response Document</i>.</p> <p>The type for an <i>Asset</i> is the term used in the <i>Asset Information Model</i> to describe different types of <i>Assets</i>. It is the term that is substituted for the <code>Asset</code> container and describes the highest-level element in the <i>Asset</i> hierarchy. See <i>MTCConnect Standard: Part 4.0 - Assets Information Model, Section 3.2.3</i> for more information on the type of an <i>Asset</i>.</p>
removed	<p><i>Assets</i> can have an attribute that indicates whether the <i>Asset</i> has been removed from a piece of equipment.</p> <p>The valid values for <code>removed</code> are <code>true</code> or <code>false</code>.</p> <p>If the value of the <code>removed</code> parameter in the <code>query</code> is <code>true</code>, then <i>Asset Documents</i> for <i>Assets</i> that have been marked as removed from a piece of equipment will be included in the <i>Response Document</i>.</p> <p>If the value of the <code>removed</code> parameter in the <code>query</code> is <code>false</code>, then <i>Asset Documents</i> for <i>Assets</i> that have been marked as removed from a piece of equipment will not be included in the <i>Response Document</i>.</p> <p>If <code>removed</code> is not defined in a <code>query</code>, the default value for <code>removed</code> MUST be determined to be <code>false</code>.</p>
count	<p>Defines the maximum number of <i>Asset Documents</i> to return in an <i>MTCConnectAssets Response Document</i>.</p> <p>If <code>count</code> is not defined in the <code>query</code>, the default value for <code>count</code> MUST be determined to be 100.</p>

2211 8.3.4.3 Response to an Asset Request

2212 The *Response* to an *Asset Request* **SHOULD** be an *MTCConnectAssets Response Document*
 2213 containing information for one or more *Asset Documents* designated by the *Request*. The
 2214 *Response* to an *Asset Request* **MUST** always provide the most recent information available
 2215 to an *Agent*.

2216 The *Asset Documents* provided in the *MTCConnectAssets Response Document* will be lim-

2217 ited to those specified in the combination of the `path` segment of the *Asset Request* and
 2218 the parameters provided in the `query` segment of that *Request*.

2219 If the `removed` query parameter is not provided with a value of `true`, *Asset Documents*
 2220 for *Assets* that have been marked as removed will not be provided in the response.

2221 8.3.4.4 HTTP Status Codes for a Asset Request

2222 The following *HTTP Status Codes* **MUST** be supported as possible responses to an *Asset*
 2223 *Request*:

Table 20: HTTP Status Codes for an Asset Request

HTTP Status Code	Code Name	Description
200	OK	The <i>Request</i> was handled successfully.
400	Bad Request	<p>The <i>Request</i> could not be interpreted.</p> <p>The <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies either <code>INVALID_URI</code> or <code>INVALID_REQUEST</code> as the <code>errorCode</code>.</p> <p>If the <code>query</code> parameters do not contain a valid value or include an invalid parameter, the <i>Agent</i> MUST return a 400 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies <code>QUERY_ERROR</code> as the <code>errorCode</code>.</p>
404	Not Found	<p>The <i>Request</i> could not be interpreted.</p> <p>The <i>Agent</i> MUST return a 404 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies <code>NO_DEVICE</code> or <code>ASSET_NOT_FOUND</code> as the <code>errorCode</code>.</p>

Continuation of Table 20		
HTTP Status Code	Code Name	Description
405	Method Not Allowed	<p>A method other than GET was specified in the <i>Request</i> or the piece of equipment specified in the <i>Request</i> could not be found.</p> <p>The <i>Agent</i> MUST return a 405 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies UNSUPPORTED as the <code>errorCode</code>.</p>
406	Not Acceptable	<p>The <i>HTTP Accept Header</i> in the <i>Request</i> was not one of the supported representations.</p> <p>The <i>Agent</i> MUST return a 406 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies UNSUPPORTED as the <code>errorCode</code>.</p>
431	Request Header Fields Too Large	<p>The fields in the <i>HTTP Request</i> exceed the limit of the implementation of the <i>Agent</i>.</p> <p>The <i>Agent</i> MUST return a 431 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies INVALID_REQUEST as the <code>errorCode</code>.</p>
500	Internal Server Error	<p>There was an unexpected error in the <i>Agent</i> while responding to a <i>Request</i>.</p> <p>The <i>Agent</i> MUST return a 500 <i>HTTP Status Code</i>. Also, the <i>Agent</i> MUST publish an <i>MTCConnectErrors Response Document</i> that identifies INTERNAL_ERROR as the <code>errorCode</code>.</p>

2224 8.3.5 HTTP Errors

2225 When an *Agent* receives an *HTTP Request* that is incorrectly formatted or is not supported
 2226 by the *Agent*, the *Agent* **MUST** publish an *HTTP Error Message* which includes a specific

2227 status code from the tables above indicating that the *Request* could not be handled by the
2228 *Agent*.

2229 Also, if the *Agent* experiences an internal error and is unable to provide the requested
2230 *Response Document*, it **MUST** publish an *HTTP Error Message* that includes a specific
2231 status code from the table above.

2232 When an *Agent* encounters an error in interpreting or responding to an *HTTP Request*,
2233 the *Agent* **MUST** also publish an *MConnectErrors Response Document* that provides
2234 additional details about the error. See *Section 9 - Error Information Model* for details on
2235 the *MConnectErrors Response Document*.

2236 8.3.6 Streaming Data

2237 *HTTP Data Streaming* is a method for a server to provide a continuous stream of informa-
2238 tion in response to a single *Request* from a client software application. *Data Streaming* is
2239 a version of a *Publish/Subscribe* method of communications.

2240 When an *HTTP Request* includes an `interval <query>` parameter, an *Agent* **MUST**
2241 provide data with a minimum delay between the end of one data transmission and the
2242 beginning of the next data transmission defined by the value (in milliseconds) provided
2243 for `interval` parameter. A value of zero (0) for the `interval` parameter indicates
2244 that the *Agent* should deliver data at the highest rate possible.

2245 The format of the response **MUST** use a MIME encoded message with each section sep-
2246 arated by a MIME boundary. Each section **MUST** contain an entire *MConnectStreams*
2247 *Response Document*.

2248 If there are no available *Data Entities* to be published after the `interval` time has
2249 elapsed, an *Agent* **MUST** wait until additional information is available to be published.
2250 If no new no new information is available to be published within the time defined by the
2251 `heartbeat` parameter, the *Agent* **MUST** then send a new section to ensure the receiver
2252 that the *Agent* is functioning correctly. In this case, the content of the *MConnect-*
2253 *Streams* document **MUST** be empty since no data is available.

2254 For more information on MIME see IETF RFC 1521 and RFC 822.

2255 An example of the format for a *HTTP Request* that includes an `interval` parameter is:

Example 8: Example for HTTP Request with interval parameter

2256 1 http://localhost:5000/sample?interval=1000

2257 HTTP Response Header:

Example 9: HTTP Response header

```
2258 1 HTTP/1.1 200 OK
2259 2 Connection: close
2260 3 Date: Sat, 13 Mar 2010 08:33:37 UTC
2261 4 Status: 200 OK
2262 5 Content-Disposition: inline
2263 6 X-Runtime: 144ms
2264 7 Content-Type: multipart/x-mixed-replace;boundary=
2265 8 a8e12eced4fb871ac096a99bf9728425
2266 9 Transfer-Encoding: chunked
```

2267 Lines 1-9 in *Example 9* represent a standard header for a MIME `multipart/x-mixed-`
2268 `replace` message. The boundary is a separator for each section of the stream. Lines 7-8
2269 indicate this is a multipart MIME message and the boundary between sections.

2270 With streaming protocols, the `Content-length` **MUST** be omitted and `Transfer-`
2271 `Encoding` **MUST** be set to `chunked` (line 9). See IETF RFC 7230 for a full description
2272 of the HTTP protocol and chunked encoding.

Example 10: HTTP Response header 2

```
2273 10 --a8e12eced4fb871ac096a99bf9728425
2274 11 Content-type: text/xml
2275 12 Content-length: 887
2276 13
2277 14 <?xml version="1.0" encoding="UTF-8"?>
2278 15 <MTConnectStreams ...>...
```

2279 Each section of the document begins with a boundary preceded by two hyphens (-). The
2280 `Content-type` and `Content-length` MIME header fields **MUST** be provided for
2281 each section and **MUST** be followed by `<CR><LF><CR><LF>` (ASCII code for `<CR>` is
2282 13 and `<LF>` is 10) before the XML document. The header and the `<CR><LF><CR><LF>`
2283 **MUST NOT** be included in the computation of the content length.

2284 An *Agent* **MUST** continue to stream results until the client closes the connection. The
2285 *Agent* **MUST NOT** stop the streaming for any other reason other than the *Agent* process
2286 shutting down or the client application becoming unresponsive and not receiving data (as
2287 indicated by not consuming data and the write operation blocking).

2288 **8.3.6.1 Heartbeat**

2289 When *Streaming Data* is requested from a *Sample Request*, an *Agent* **MUST** support a
2290 *heartbeat* to indicate to a client application that the HTTP connection is still viable during

2291 times when there is no new data available to be published. The *heartbeat* is indicated by
 2292 an *Agent* by sending an *MTCConnect Response Document* with an empty *Streams* container
 2293 (See *MTCConnect Standard: Part 3.0 - Streams Information Model, Section 4.1 Streams* for
 2294 more details on the *Streams* container) to the client software application.

2295 The *heartbeat* **MUST** occur on a periodic basis given by the optional *heartbeat* query
 2296 parameter and **MUST** default to 10 seconds. An *Agent* **MUST** maintain a separate *heart-*
 2297 *beat* for each client application for which the *Agent* is responding to a *Data Streaming*
 2298 *Request*.

2299 An *Agent* **MUST** begin calculating the interval for the time-period of the *heartbeat* for
 2300 each client application immediately after a *Response Document* is published to that spe-
 2301 cific client application.

2302 The *heartbeat* remains in effect for each client software application until the *Data Stream-*
 2303 *ing Request* is terminated by either the *Agent* or the client application.

2304 8.3.7 References

2305 A *Structural Element* **MAY** include a set of *References* of the following types that **MAY**
 2306 alter the content of the *MTCConnectStreams Response Documents* published in response to
 2307 a *Current Request* or a *Sample Request* as specified:

- 2308 • A *Component Reference* (*ComponentRef*) modifies the set of resulting *Data Enti-*
 2309 *tities*, limited by a path query parameter of a *Current Request* or *Sample Request*,
 2310 to include the *Data Entities* associated with the *Structural Element* whose value for
 2311 its *id* attribute matches the value provided for the *idRef* attribute of the *Compo-*
 2312 *nentRef* element. Additionally, *Data Entities* defined for any *Lower Level Struc-*
 2313 *tural Element(s)* associated with the identified *Structural Element* **MUST** also be
 2314 returned. The result is equivalent to appending `// [@id=<"idRef">]` to the path
 2315 query parameters of the *Current Request* or *Sample Request*. See *Section 8.3.2 -*
 2316 *Current Request Implemented Using HTTP* for more details on path queries.

- 2317 • A *Data Item Reference* (*DataItemRef*) modifies the set of resulting *Data Enti-*
 2318 *tities*, limited by a path query parameter of a *Current Request* or *Sample Request*, to
 2319 include the *Data Entity* whose value for its *id* attribute matches the value provided
 2320 for the *idRef* attribute of the *DataItemRef* element. The result is equivalent
 2321 to appending `// [@id=<"idRef">]` to the path query parameters of the *Current*
 2322 *Request* or *Sample Request*. See *Section 8.3.2 - Current Request Implemented Using*
 2323 *HTTP* for more details on path queries.

2324 9 Error Information Model

2325 The *Error Information Model* establishes the rules and terminology that describes the *Re-*
 2326 *sponse Document* returned by an *Agent* when it encounters an error while interpreting a
 2327 *Request* for information from a client software application or when an *Agent* experiences
 2328 an error while publishing the *Response* to a *Request* for information.

2329 An *Agent* provides the information regarding errors encountered when processing a *Re-*
 2330 *quest* for information by publishing an *MTCConnectErrors Response Document* to the client
 2331 software application that made the *Request* for information.

2332 9.1 MTCConnectError Response Document

2333 The *MTCConnectErrors Response Document* is comprised of two sections: Header and
 2334 Errors.

2335 The Header section contains information defining the creation of the document and the
 2336 data storage capability of the *Agent* that generated the document. (See *Section 6.5.4 -*
 2337 *Header for MTCConnectError*)

2338 The Errors section of the *MTCConnectErrors Response Document* is a *Structural Element*
 2339 that organizes *Data Entities* describing each of the errors reported by an *Agent*.

2340 9.1.1 Structural Element for MTCConnectError

2341 *Structural Elements* are XML elements that form the logical structure for an XML docu-
 2342 ment. The *MTCConnectErrors Response Document* has only one *Structural Element*. This
 2343 *Structural Element* is Errors. Errors is an XML container element that organizes the
 2344 information and data associated with all errors relevant to a specific *Request* for informa-
 2345 tion.

2346 The following *XML Schema* represents the structure of the Errors XML element.

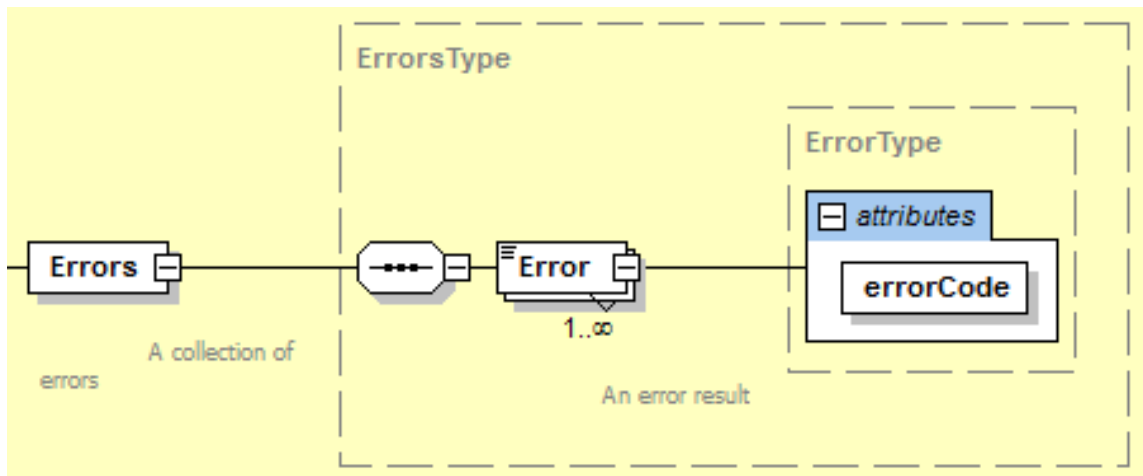

Figure 21: Errors Schema Diagram

Table 21: MTConnect Errors Element

Element	Description	Occurrence
Errors	<p>An XML container element in an <i>MTConnectErrors Response Document</i> provided by an <i>Agent</i> when an error is encountered associated with a <i>Request</i> for information from a client software application.</p> <p>There MUST be only one <code>Errors</code> element in an <i>MTConnectErrors Response Document</i>.</p> <p>The <code>Errors</code> element MUST contain at least one <code>Error Data Entity</code> element.</p>	1

2347 Note: When compatibility with Version 1.0.1 and earlier of the MTConnect Standard
 2348 is required for an implementation, the *MTConnectErrors Response Document*
 2349 contains only a single *Error Data Entity* and the *Errors Structural Element*
 2350 **MUST NOT** appear in the document.

2351 9.1.2 Error Data Entity

2352 When an *Agent* encounters an error when responding to a *Request* for information from
 2353 a client software application, the information describing the error(s) is reported as a *Data*
 2354 *Entity* in an *MTConnectErrors Response Document*. *Data Entities* are organized in the
 2355 `Errors` XML container.

2356 There is only one type of *Data Entity* defined for an *MTConnectErrors Response Docu-*
 2357 *ment*. That *Data Entity* is called `Error`.

2358 The following is an illustration of the structure of an XML document demonstrating how
 2359 `Error Data Entities` are reported in an *MTConnectErrors Response Document*:

Example 11: Example of Error in MTConnectError

```
2360 1 <MTConnectError>
2361 2   <Header/>
2362 3   <Errors>
2363 4     <Error/>
2364 5     <Error/>
2365 6     <Error/>
2366 7   </Errors>
2367 8 </MTConnectError>
```

2368 The `Errors` element **MUST** contain at least one *Data Entity*. Each *Data Entity* describes
 2369 the details for a specific error reported by an *Agent* and is represented by the XML element
 2370 named `Error`.

2371 `Error` XML elements **MAY** contain both attributes and CDATA that provide details fur-
 2372 ther defining a specific error. The CDATA **MAY** provide the complete text provided by an
 2373 *Agent* for the specific error.

2374 9.1.2.1 XML Schema Structure for Error

2375 The *XML Schema* in *Figure 22* represents the structure of an `Error` XML element show-
 2376 ing the attributes defined for `Error`.

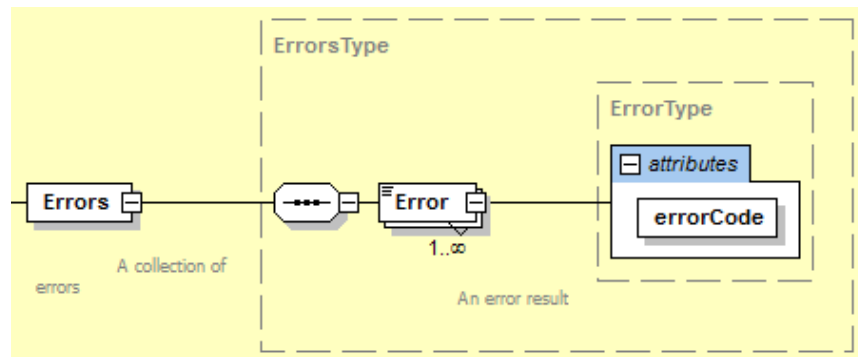

Figure 22: Error Schema Diagram

2377 **9.1.2.2 Attributes for Error**

2378 Error has one attribute. Table 22 defines this attribute that provides additional informa-
 2379 tion for an Error XML element.

Table 22: Attributes for Error

Attribute	Description	Occurrence
errorCode	Provides a descriptive code that indicates the type of error that was encountered by an Agent when attempting to respond to a Request for information. errorCode is a required attribute.	1

2380 **9.1.2.3 Values for errorCode**

2381 There is a limited vocabulary defined for errorCode. The value returned for error-
 2382 Code **MUST** be one of the following:

Table 23: Values for errorCode

Value for errorCode	Description
ASSET_NOT_FOUND	The <i>Request</i> for information specifies an <i>MTCConnect Asset</i> that is not recognized by the <i>Agent</i> .
INTERNAL_ERROR	The <i>Agent</i> experienced an error while attempting to published the requested information.
INVALID_REQUEST	The <i>Request</i> contains information that was not recognized by the <i>Agent</i> .
INVALID_URI	The URI provided was incorrect.
INVALID_XPATH	The XPath identified in the <i>Request</i> for information could not be parsed correctly by the <i>Agent</i> . This could be caused by an invalid syntax or the XPath did not match a valid identify for any information stored in the <i>Agent</i> .
NO_DEVICE	The identity of the piece of equipment specified in the <i>Request</i> for information is not associated with the <i>Agent</i> .
OUT_OF_RANGE	The <i>Request</i> for information specifies <i>Streaming Data</i> that includes sequence number(s) for pieces of data that are beyond the end of the <i>buffer</i> .
QUERY_ERROR	The <i>Agent</i> was unable to interpret the <i>Query</i> . The <i>Query</i> parameters do not contain valid values or include an invalid parameter.
TOO_MANY	The <code>count</code> parameter provided in the <i>Request</i> for information requires either of the following: <ul style="list-style-type: none"> - <i>Streaming Data</i> that includes more pieces of data than the <i>Agent</i> is capable of organizing in an <i>MTCConnectStreams Response Document</i>. - Assets that include more <i>Asset Documents</i> in an <i>MTCConnectAssets Response Document</i> than the <i>Agent</i> is capable of handling.
UNAUTHORIZED	The <i>Requester</i> does not have sufficient permissions to access the requested information.
UNSUPPORTED	A valid <i>Request</i> was provided, but the <i>Agent</i> does not support the feature or type of <i>Request</i> .

2383 9.1.2.4 CDATA for Error

2384 The CDATA for `Error` contains a textual description of the error and any additional
 2385 information an *Agent* is capable of providing regarding a specific error. The *Valid Data*
 2386 *Value* returned for `Error` **MAY** be any text string.

2387 9.1.3 Examples for `MTConnectError`

2388 *Example 12* is an example demonstrating the structure of an *MTConnectErrors Response*
 2389 *Document*:

Example 12: Example of structure for `MTConnectError`

```

2390 1 <?xml version="1.0" encoding="UTF-8"?>
2391 2 <MTConnectError
2392 3   xmlns="urn:mtconnect.org:MTConnectError:1.4"
2393 4   xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance
2394 5   xsi:schemaLocation="urn:mtconnect.org:MTConnectError
2395 6     :1.4/schemas/MTConnectError_1.4.xsd">
2396 7   <Header creationTime="2010-03-12T12:33:01Z"
2397 8     sender="MyAgent" version="1.4.1.10"

2403 14      path</Error>
2404 15  </Errors>
2405 16 </MTConnectError>

```

2406 *Example 13* is an example demonstrating the structure of an *MTConnectErrors Response*
 2407 *Document* when backward compatibility with Version 1.0.1 and earlier of the `MTConnect`
 2408 `Standard` is required. In this case, the *Document Body* contains only a single *Error Data*
 2409 *Entity* and the `Errors Structural Element` **MUST NOT** appear in the document.

Example 13: Example of structure for `MTConnectError` when backward compatibility is required

```

2410 1 <?xml version="1.0" encoding="UTF-8"?>
2411 2 <MTConnectError
2412 3   xmlns="urn:mtconnect.org:MTConnectError:1.1"
2413 4   xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance
2414 5   xsi:schemaLocation="urn:mtconnect.org:MTConnectError
2415 6     :1.1/schemas/MTConnectError_1.1.xsd">
2416 7   <Header creationTime="2010-03-12T12:33:01Z"
2417 8     sender="MyAgent" version="1.1.0.10"
2418 9     bufferSize="131000" instanceId="1383839" />

```

July 15, 2020

```
2419 10    <Error errorCode="OUT_OF_RANGE" >Argument was out
2420 11      of range</Error>
2421 12 </MTConnectError>
```

2464 B Fundamentals of Using XML to Encode Response Documents

2465 The MTConnect Standard specifies the structures and constructs that are used to encode
 2466 *Response Documents*. When these *Response Documents* are encoded using XML, there
 2467 are additional rules defined by the XML standard that apply for creating an XML compli-
 2468 ant document. An implementer should refer to the W3C website for additional information
 2469 on XML documentation and implementation details - <http://www.w3.org/XML>.

2470 The following provides specific terms and guidelines referenced in the MTConnect Stan-
 2471 dard for forming *Response Documents* with XML:

- 2472 • **tag**: A `tag` is an XML construct that forms the foundation for an XML expression.
 2473 It defines the scope (beginning and end) of an XML expression. The main types of
 2474 tags are:
 - 2475 • **start-tag**: Designates the beginning on an XML element; e.g., `<Element Name>`
 - 2476 • **end-tag**: Designates the end on an XML element; e.g., `</Element Name>`.
 2477 Note: If an element has no *Child Elements* or CDATA, the `end-tag` may be
 2478 shortened to `/>`.
 - 2479 • **Element**: An element is an XML statement that is the primary building block
 2480 for a document encoded using XML. An element begins with a `start-tag` and
 2481 ends with a matching `end-tag`. The characters between the `start-tag` and the
 2482 `end-tag` are the element's content. The content may contain attributes, CDATA,
 2483 and/or other elements. If the content contains additional elements, these elements
 2484 are called *Child Elements*.
 2485 An example would be: `<Element Name>Content of the Element</Element Name>`.
 - 2486 • **Child Element**: An XML element that is contained within a higher-level *Parent El-*
 2487 *ement*. A *Child Element* is also known as a sub-element. XML allows an unlimited
 2488 hierarchy of *Parent Element-Child Element* relationships that establishes the struc-
 2489 ture that defines how the various pieces of information in the document relate to
 2490 each other. A *Parent Element* may have multiple associated *Child Elements*.
 - 2491 • **Element Name**: A descriptive identifier contained in both the `start-tag` and
 2492 `end-tag` that provides the name of an XML element.
 - 2493 • **Attribute**: A construct consisting of a name-value pair that provides additional
 2494 information about that XML element. The format for an attribute is `name="value"`;
 2495 where the value for the attribute is enclosed in a set of quotation (") marks. An XML
 2496 attribute **MUST** only have a single value and each attribute can appear at most once
 2497 in each element. Also, each attribute **MUST** be defined in a *schema* to either be
 2498 required or optional.

- 2499 • An example of attributes for an XML element is *Example 14*:

Example 14: Example of attributes for an element

```
2500 1 <DataItem category="SAMPLE" id="S1load"
2501 2   nativeUnits="PERCENT" type="LOAD"
2502 3   units="PERCENT"/>
```

2503 In this example, `DataItem` is the `ElementName`. `category`, `id`, `nativeU-`
 2504 `nativeUnits`, `type`, and `units` are the names of the attributes. "SAMPLE", "S1load",
 2505 "PERCENT", "LOAD", and "PERCENT" are the values for each of the respective
 2506 attributes.

- 2507 • **CDATA:** CDATA is an XML term representing *Character Data*. *Character Data*
 2508 contains a value(s) or text that is associated with an XML element. CDATA can be
 2509 restricted to certain formats, patterns, or words.

2510 An example of CDATA associated with an XML element would be *Example 15*:

Example 15: Example of cdata associated with element

```
2511 1 <Message id="M1">This is some text</Message>
```

2512 In this example, `Message` is the `ElementName` and `This is some text` is
 2513 the CDATA.

- 2514 • **namespace:** An XML *namespace* defines a unique vocabulary for named elements
 2515 and attributes in an XML document. An XML document may contain content that is
 2516 associated with multiple *namespaces*. Each *namespace* has its own unique identifier.

2517 Elements and attributes are associated with a specific *namespace* by placing a pre-
 2518 fix on the name of the element or attribute that associates that name to a specific
 2519 *namespace*; e.g., `x:MyTarget` associates the element name `MyTarget` with the
 2520 *namespace* designated by `x:` (the prefix).

2521 *namespaces* are used to avoid naming conflicts within an XML document. The
 2522 naming convention used for elements and attributes may be associated with either
 2523 the default *namespace* specified in the *Header* of an XML document or they may
 2524 be associated with one or more alternate *namespaces*. All elements or attributes
 2525 associated with a *namespace* that is not the default *namespace*, must include a prefix
 2526 (e.g., `x:`) as part of the name of the element or attribute to associate it with the proper
 2527 *namespace*. See *Appendix C* for details on the structure for XML *Headers*.

2528 The names of the elements and attributes declared in a *namespace* may be identified
 2529 with a different prefix than the prefix that signifies that specific *namespace*. These
 2530 prefixes are called *namespace* aliases. As an example, MTConnect Standard spe-
 2531 cific *namespaces* are designated as `m:` and the names of the elements and attributes
 2532 defined in that *namespace* have an alias prefix of `mt:` which designates these names
 2533 as MTConnect Standard specific vocabulary; e.g., `mt:MTConnectDevices`.

2534 XML documents are encoded with a hierarchy of elements. In general, XML elements
 2535 may contain *Child Elements*, CDATA, or both. However, in the MTConnect Standard,
 2536 an element **MUST NOT** contain mixed content; meaning it cannot contain both *Child*
 2537 *Elements* and CDATA.

2538 The *semantic data model* defined for each *Response Document* specifies the elements and
 2539 *Child Elements* that may appear in a document. The *semantic data model* also defines the
 2540 number of times each element and *Child Element* may appear in the document.

2541 *Example 16* demonstrates the hierarchy of XML elements and *Child Elements* used to
 2542 form an XML document:

Example 16: Example of hierarchy of XML elements

```

2543 1 <Root Level>      (Parent Element)
2544 2   <First Level>  (Child Element to Root Level and
2545 3   Parent Element to Second Level)
2546 4     <Second Level> (Child Element to First Level
2547 5     and Parent Element to Third Level)
2548 6       <Third Level name="N1"></Third Level>
2549 7       (Child Element to Second Level)
2550 8       <Third Level name="N2"></Third Level>
2551 9       (Child Element to Second Level)
2552 10      <Third Level name="N3"></Third Level>
2553 11      (Child Element to Second Level)
2554 12      </Second Level>  (end-tag for Second Level)
2555 13      </First Level>   (end-tag for First Level)
2556 14 </Root Level>   (end-tag for Root Level)

```

2557 In the *Example 16*, *Root Level* and *First Level* have one *Child Element* (sub-elements)
 2558 each and *Second Level* has three *Child Elements*; each called *Third Level*. Each *Third*
 2559 *Level* element has a different name attribute. Each level in the structure is an element and
 2560 each lower level element is a *Child Element*.

2561 C Schema and Namespace Declaration Information

2562 There are four pseudo-attributes typically included in the *Header* of a *Response Document*
 2563 that declare the *schema* and *namespace* for the document. Each of these pseudo-attributes
 2564 provides specific information for a client software application to properly interpret the
 2565 content of the *Response Document*.

2566 The pseudo-attributes include:

2567 • `xmlns:xsi` – The `xsi` portion of this attribute name stands for *XML Schema*
 2568 instance. An *XML Schema* instance provides information that may be used by a
 2569 software application to interpret XML specific information within a document. See
 2570 the W3C website for more details on `xmlns:xsi`.

2571 • `xmlns` – Declares the default *namespace* associated with the content of the *Re-*
 2572 *sponse Document*. The default *namespace* is considered to apply to all elements and
 2573 attributes whenever the name of the element or attribute does not contain a prefix
 2574 identifying an alternate *namespace*.

2575 The value of this attribute is an URN identifying the name of the file that defines
 2576 the details of the *namespace* content. This URN provides a unique identify for the
 2577 *namespace*.

2578 • `xmlns:m` – Declares the MTConnect specific *namespace* associated with the con-
 2579 tent of the *Response Document*. There may be multiple *namespaces* declared for
 2580 an XML document. Each may be associated to the default *namespace* or it may be
 2581 totally independent. The `:m` designates that this is a specific MTConnect *namespace*
 2582 which is directly associated with the default *namespace*.

2583 Note: See *Section 6.7 - Extensibility* for details regarding extended *namespaces*.

2584 The value associated with this attribute is an URN identifying the name of the file
 2585 that defines the details of the *namespace* content.

2586 • `xsi:schemaLocation` - Declares the name for the *schema* associated with the
 2587 *Response Document* and the location of the file that contains the details of the
 2588 *schema* for that document.

2589 The value associated with this attribute has two parts:

2590 - A URN identifying the name of the specific *XML Schema* instance associated
 2591 with the *Response Document*.

2592 - The path to the location where the file describing the specific *XML Schema*
 2593 instance is located. If the file is located in the same root directory where the *Agent*
 2594 is installed, then the local path MAY be declared. Otherwise, a fully qualified URL
 2595 must be declared to identify the location of the file.

2596 Note: In the format of the value associated with `xsi:schemaLocation`, the
2597 URN and the path to the *schema* file **MUST** be separated by a “space”.

2598 In *Example 17*, the first line is the *XML Declaration*. The second line is a *Root Ele-*
2599 *ment* called `MTConnectDevices`. The remaining four lines are the pseudo-attributes of
2600 `MTConnectDevices` that declare the XML *schema* and *namespace* associated with an
2601 *MTConnectDevices Response Document*.

Example 17: Example of schema and namespace declaration

```
2602 1 <?xml version="1.0" encoding="UTF-8"?>
2603 2 <MTConnectDevices
2604 3   xmlns:xsi=http://www.w3.org/2001/XMLSchema-instance
2605 4   xmlns="urn:mtconnect.org:MTConnectDevices:1.3"
2606 5   xmlns:m="urn:mtconnect.org:MTConnectDevices:1.3"
2607 6   xsi:schemaLocation="urn:mtconnect.org:
2608 7     MTConnectDevices:1.3 /schemas/MTConnectDevices\_1.3.xsd">
```

2609 The format for the values provided for each of the pseudo-attributes **MUST** reference
2610 the *semantic data model* (e.g., `MTConnectDevices`, `MTConnectStreams`, `MTCon-`
2611 `nectAssets`, or `MTConnectError`) and the version (i.e.; 1.1, 1.2, 1.3, etc.) of
2612 the MTConnect Standard that depict the *schema* and *namespace(s)* associated with a spe-
2613 cific *Response Document*.

2614 When an implementer chooses to extend an MTConnect *Data Model* by adding custom
2615 data types or additional *Structural Elements*, the *schema* and *namespace* for that *Data*
2616 *Model* should be updated to reflect the additional content. When this is done, the *names-*
2617 *pace* and *schema* information in the *Header* should be updated to reflect the URI for the
2618 extended *namespace* and *schema*.
